COURSE ADMINISTRATION

Welcome & Housekeeping

© 2026 Tertiary Infotech Academy Pte Ltd

MANDATORY · SSG / WSQ

Digital Attendance & TRAQOM Survey

Scan with your phone camera

1. **Three attendance takes**
   AM, PM and Assessment — every day of a WSQ-funded course.
2. **The trainer shows the QR**
   Generated live from the SSG portal — it changes each session.
3. **Scan and submit**
   Open your phone camera, scan, and submit your attendance.
4. **75% minimum**
   Below 75% attendance you lose funding eligibility and cannot be assessed.
5. **TRAQOM survey**
   Complete the mandatory course survey on the LMS before you leave.

About the Trainer

Dr. Alfred Ang

Principal Trainer
Tertiary Infotech Academy Pte Ltd

ROLE
Principal Trainer, Tertiary Infotech Academy Pte Ltd

BACKGROUND
PhD — 20+ years of industry and training experience in enterprise software, cloud platforms and business applications.

DELIVERS
WSQ courses on Microsoft Dynamics 365, Power Platform, data analytics, AI and cloud technologies.

CERTIFICATIONS
Microsoft Certified Trainer; Dynamics 365 and Power Platform certified.

FOUNDER
Founder and lead instructor at Tertiary Infotech / Tertiary Courses.

© 2026 Tertiary Infotech Academy Pte Ltd

ICE-BREAKER

Let's Know Each Other

1

Who you are

Your name, your organisation and your role.

2

Your CRM experience

Dynamics 365, Salesforce, HubSpot — or none at all. All are welcome.

3

Which part you own

Marketing, sales, customer service or field operations?

4

Your goal for tomorrow

One thing you want to be able to do with Dynamics 365 by the end of Day 2.

© 2026 Tertiary Infotech Academy Pte Ltd

HOUSEKEEPING

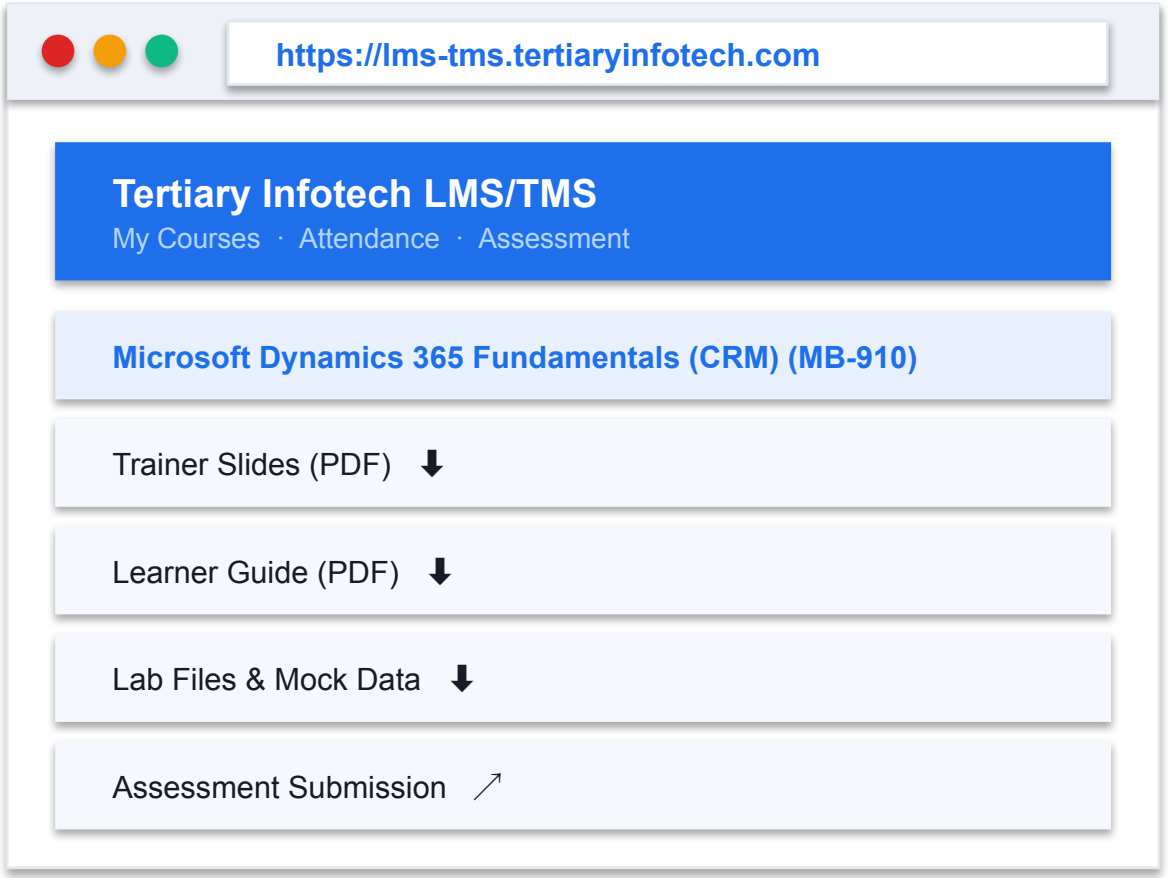

Ground Rules

1. Set your mobile phone to silent mode.
2. Participate actively — no question is too small.
3. Respect each other's views; agree to disagree.
4. One conversation at a time.
5. Step out quietly for calls or breaks.
6. Be punctual; return from breaks on time.
7. 75% attendance is required for funding.
8. Ask for help the moment a lab step fails.

© 2026 Tertiary Infotech Academy Pte Ltd

COURSE PORTAL · LMS/TMS

Download Course Material

1 — Sign in
lms-tms.tertiaryinfotech.com — log in with your registered email.

2 — Open your course
Select this course under My Courses.

3 — Download materials
Slides, Learner Guide and lab files — your open-book references.

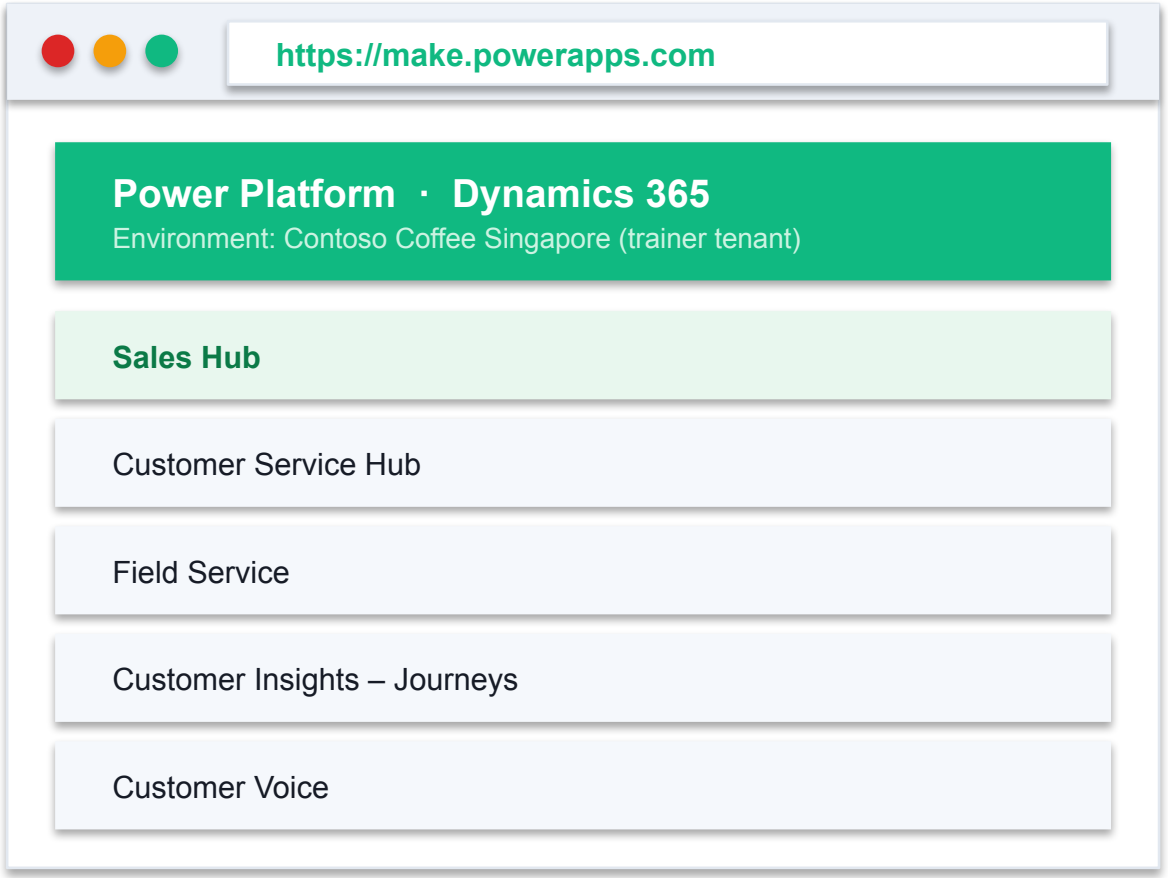

4 — Submit & survey
Upload your assessment answers and complete the TRAQOM survey.

All course material is downloaded from the LMS/TMS portal — keep it open: the final assessment is open book.

© 2026 Tertiary Infotech Academy Pte Ltd

HANDS-ON · 10 LABS

Your Lab Environment

1 **Sign in**
Use the trainer-provided training<N>@tertiaryinfotech.onmicrosoft.com account.

2 **Prefix your records**
Add your initials to every record — the tenant is shared with the class.

3 **Import the mock data**
Each lab folder carries its own CSV files to import.

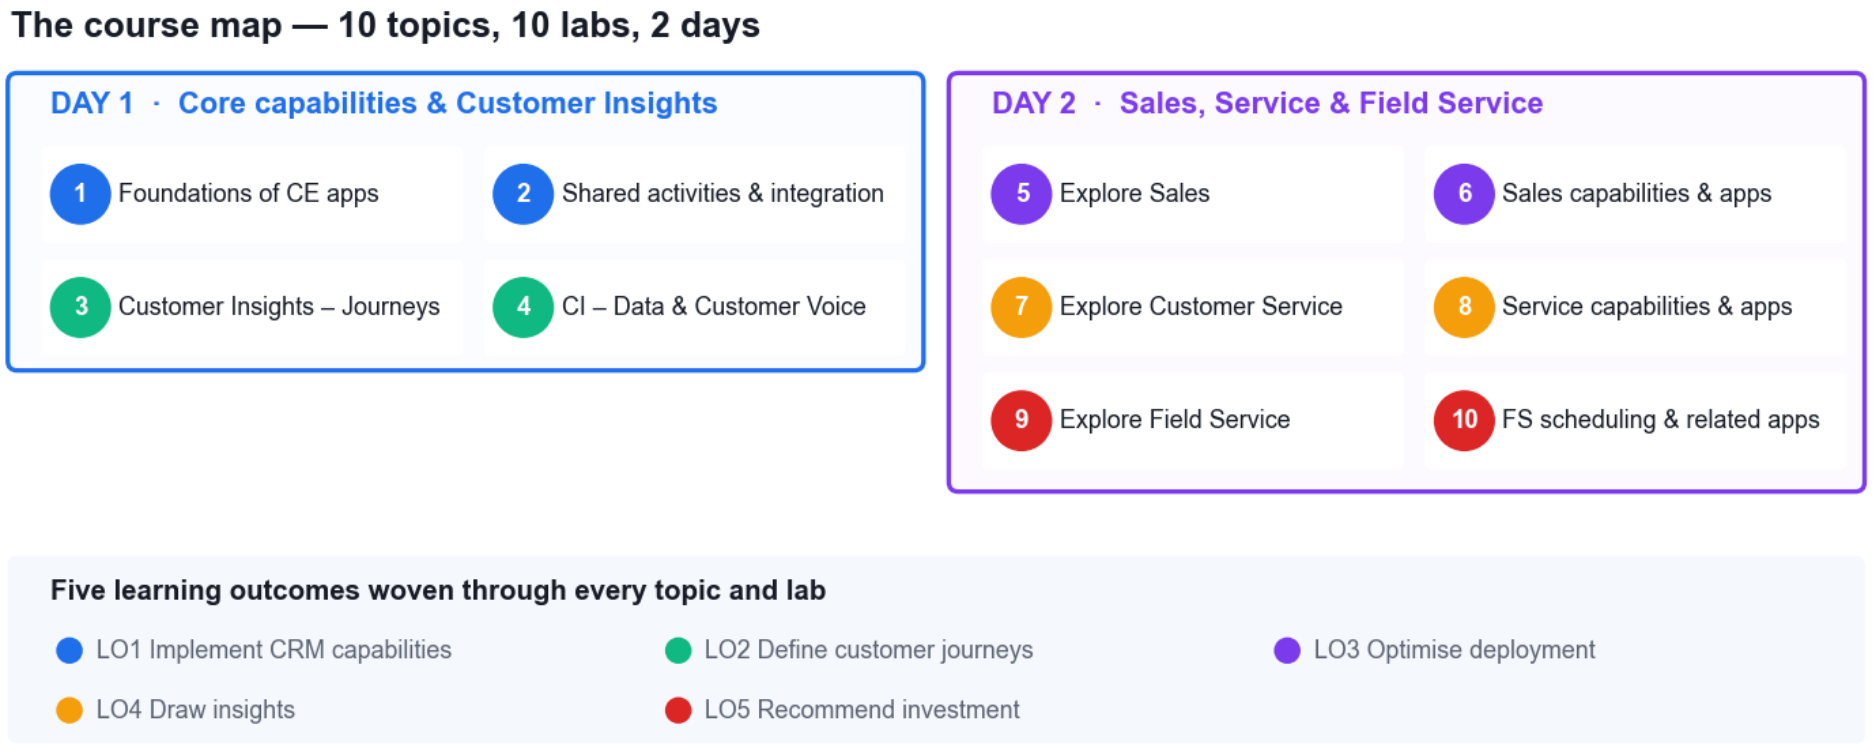

4 **Follow the Learner Guide**
Every step, field value and verification is written there.

No Dynamics 365 tenant? A 30-day trial at trials.dynamics.com gives you every app used in these labs.

© 2026 Tertiary Infotech Academy Pte Ltd

WHERE WE ARE GOING

The Course Map

Day 1 builds the platform foundations and the marketing apps; Day 2 covers Sales, Customer Service and Field Service, ending with the assessment.

© 2026 Tertiary Infotech Academy Pte Ltd

SCHEDULE · 8 TRAINING HOURS

Lesson Plan — Day 1

Core platform & shared capabilities

- **Morning · AM digital attendance**
  - Welcome, introductions, ground rules, learning outcomes
  - Topic 1 — Foundations of Dynamics 365 CE apps
  - Lab 1 — Navigate Dynamics 365 and explore Dataverse
  - Tea break (15 min)
  - Topic 2 — Shared activities and integration options
  - Lab 2 — Manage customers, activities and reporting views
  - Lunch break 1:30–2:30pm

The Customer Insights apps

- **Afternoon · PM digital attendance**
  - Topic 3 — Customer Insights – Journeys
  - Lab 3 — Build a segment, an email and a customer journey
  - Tea break (15 min)
  - Topic 4 — Customer Insights – Data and Customer Voice
  - Lab 4 — Unify customer data and capture feedback
  - Day 1 recap and Q&A

9:30am–6:30pm · 1-hour lunch · tea breaks counted within training time.

© 2026 Tertiary Infotech Academy Pte Ltd

SCHEDULE · 8 TRAINING HOURS

Lesson Plan — Day 2

Sales & the start of Service

- **Morning · AM digital attendance**
  - Day 1 recap
  - Topic 5 — Explore Dynamics 365 Sales
  - Lab 5 — Run the lead-to-cash cycle
  - Tea break (15 min)
  - Topic 6 — Sales capabilities and related apps
  - Lab 6 — Forecast the pipeline and evaluate Sales Insights
  - Topic 7 — Explore Dynamics 365 Customer Service
  - Lunch break 1:30–2:30pm

Service, Field Service & assessment

- **Afternoon · PM & assessment attendance**
  - Lab 7 — Resolve a case with knowledge, queues and SLAs
  - Topic 8 — Service capabilities and related apps
  - Lab 8 — Omnichannel, supervisor insights and analytics
  - Topic 9 & 10 — Field Service and scheduling
  - Labs 9 & 10 — Work orders, scheduling, assets and IoT
  - Briefing for assessment
  - Written Assessment (1 h) + Practical Performance (1 h)

The final assessment runs from 4:30pm on Day 2 — 2 hours in total, open book.

© 2026 Tertiary Infotech Academy Pte Ltd

WSQ ALIGNMENT

Skills Framework — Customer Relationship Management

TSC element	Detail
TSC Title / Code	Customer Relationship Management · RET-RAN-4001-1.1
Ability A1	Develop and manage plans for implementing new CRM capabilities
Ability A2	Review research findings and recommend investments in CRM tools and technologies deployment
Ability A3	Manage and monitor optimisation of CRM tools and technologies
Ability A4	Draw and communicate insights from CRM data
Ability A5	Draw insights into team's performance and fine-tune sales processes
Ability A6	Utilise appropriate tools to share information and stay connected from anywhere
Ability A7	Develop and define customer journeys for marketing and remarketing
Knowledge K1	Organisation's CRM strategies
Knowledge K2	Limitations of CRM
Knowledge K3	Opportunities of CRM
Knowledge K4	Types of CRM technology and tools
Knowledge K5	Criteria for recommending investments in CRM tools and technologies
Knowledge K6	Criteria for improving existing CRM practices and programmes
Knowledge K7	Processes involved in monitoring optimisation of CRM tools and technologies
Knowledge K8	Methods for drawing and communicating insights from CRM data
Knowledge K9	Criteria for reviewing research findings related to CRM

Every topic, lab and assessment item in this course maps to these TSC abilities and knowledge factors.

© 2026 Tertiary Infotech Academy Pte Ltd

BY THE END OF THIS COURSE

Learning Outcomes

1

LO1

Develop strategies for implementing Microsoft Dynamics 365 CRM capabilities and utilising the tools to disseminate information

2

LO2

Develop frameworks to define customer journeys for marketing on Microsoft Dynamics 365 CRM

3

LO3

Manage strategies to optimise the deployment and performance of Dynamics 365 customer engagement apps

4

LO4

Draw actionable insights from Dynamics 365 CRM data to evaluate team and service performance

5

LO5

Review research outcomes and recommend investments in Dynamics 365 CRM tools and technologies

© 2026 Tertiary Infotech Academy Pte Ltd

THE JOURNEY

Course Outline — Ten Topics

Day 1

- **Topic 1 — Foundations of CE apps**
  - CRM · Power Platform · Dataverse · the five apps · Copilot · navigation
- **Topic 2 — Shared activities & integration**
  - Customers · activities · search · views, charts, dashboards · Excel, Teams, Outlook
- **Topic 3 — Customer Insights – Journeys**
  - Email marketing · segments · journeys · leads · forms · events
- **Topic 4 — CI – Data & Customer Voice**
  - Unified profiles · measures · segments · survey feedback
- **Topic 5 — Explore Sales**
  - Lifecycle · leads · opportunities · quotes, orders, invoices · BPFs

Day 2

- **Topic 6 — Sales capabilities & apps**
  - Forecasting · Sales Insights · LinkedIn · mobile · Copilot for Sales
- **Topic 7 — Explore Customer Service**
  - Cases · SLAs & entitlements · queues & routing · knowledge
- **Topic 8 — Service capabilities & apps**
  - Omnichannel · supervisor insights · sentiment · analytics
- **Topic 9 — Explore Field Service**
  - Work orders · lifecycle · inspections · mobile app
- **Topic 10 — FS scheduling & related apps**
  - Schedule board & assistant · assets · Connected Field Service

© 2026 Tertiary Infotech Academy Pte Ltd

BEFORE THE ASSESSMENT

Briefing for Assessment

1

Clear your desk

Phones and other materials go under the table or on the floor.

2

No photos, no recording

Assessment scripts must not be photographed or recorded.

3

No discussion

Work independently once the assessment has started.

4

Black or blue pen

For hard-copy answers. No liquid paper or correction tape.

5

Scripts collected on time

All scripts are collected when the time is up.

6

You may appeal

An appeal process is available if you disagree with the outcome.

© 2026 Tertiary Infotech Academy Pte Ltd

Final Assessment

Instrument 1 — knowledge

- **Written Assessment (WA)**
  - Short-Answer Questions (SAQ)
  - 1 hour · open book
  - Tests your KNOWLEDGE of the four MB-910 skill areas
  - Answer in your own words — no multiple choice

Instrument 2 — practical

- **Practical Performance (PP)**
  - Hands-on tasks in Dynamics 365
  - 1 hour · open book
  - Tests your ABILITY — drawn from the ten class labs
  - Nothing is assessed that you have not already done

Open book means the course slides, the Learner Guide and approved materials only. You must be assessed Competent in BOTH instruments.

© 2026 Tertiary Infotech Academy Pte Ltd

ON ASSESSMENT DAY

Assessment Flow

Competent in BOTH instruments + 75% attendance = certificate and WSQ funding

Survey → attendance → Written Assessment → Practical Performance → sign the Assessment Summary Record.

© 2026 Tertiary Infotech Academy Pte Ltd

WSQ FUNDING REQUIREMENTS

Criteria for Funding

1

75% minimum attendance

Based on the SSG digital attendance record — AM, PM and assessment, both days.

2

Assessed 'Competent'

In BOTH the Written Assessment and the Practical Performance.

3

Complete the TRAQOM survey

The mandatory post-course survey on the LMS/TMS portal.

4

Then you receive

A Tertiary Infotech Certificate of Achievement and an SSG OpenCert.

© 2026 Tertiary Infotech Academy Pte Ltd

LET'S BEGIN

Day 1

Core capabilities, shared activities and the Customer Insights apps.

© 2026 Tertiary Infotech Academy Pte Ltd

01

TOPIC 01

Foundations of Dynamics 365 Customer Engagement Apps

CRM concepts · Power Platform · Microsoft Dataverse · the five CE apps · Copilot · navigation

© 2026 Tertiary Infotech Academy Pte Ltd

THE FOUNDATION OF EVERYTHING THAT FOLLOWS

What Is Customer Relationship Management?

1

A customer is an entity you serve

Any entity receiving, consuming or purchasing a product or service — an organisation or a person.

2

Engagement is emotional

The connection between the customer and your brand — CRM exists to build and keep it.

3

Engaged customers are worth more

They buy more often, stay longer, cost less to serve and recommend you to others.

4

CRM is the system of record

One place for every interaction across marketing, sales, service and field operations.

5

Not just a contact list

Process, automation, analytics and AI on top of the data — that is what makes it CRM.

6

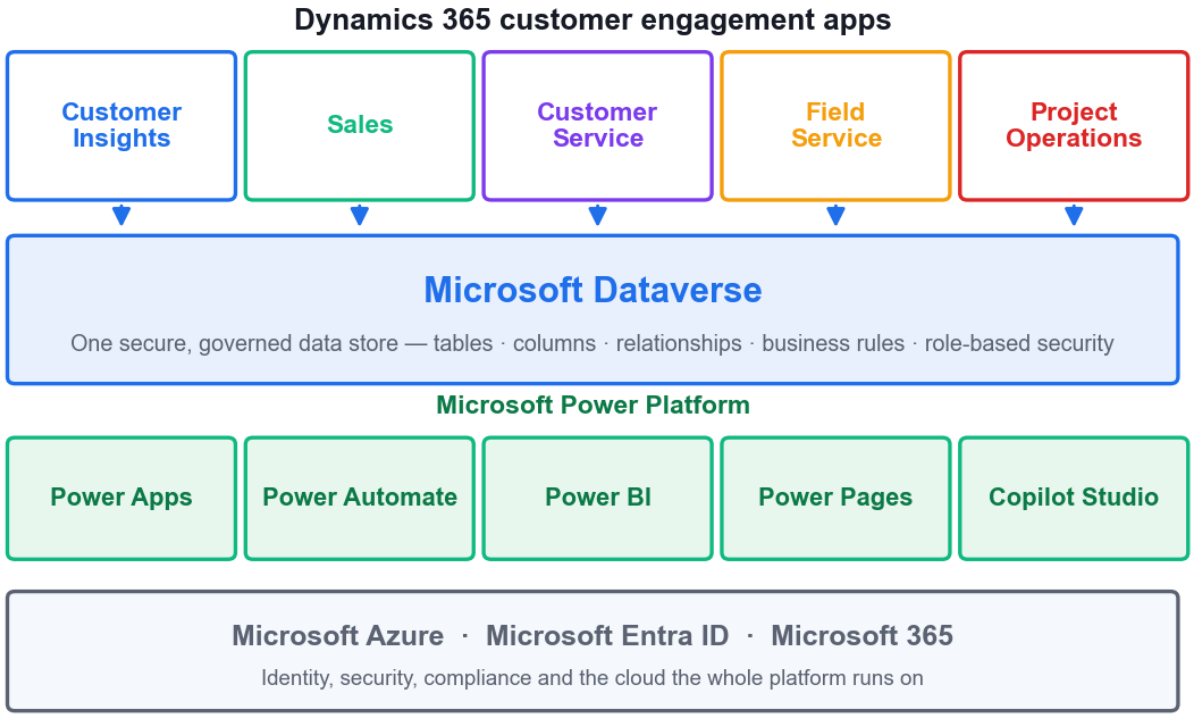

The business case

Higher retention, shorter sales cycles, faster resolution, better forecasting.

© 2026 Tertiary Infotech Academy Pte Ltd

ONE PLATFORM, MANY APPS

Power Platform, Dataverse and the CE Apps

Apps on top

The five customer engagement apps are model-driven Power Apps — licensed separately, deployed modularly.

Dataverse in the middle

One secure, governed database. Every app reads and writes the same rows.

Power Platform underneath

Power Apps, Power Automate, Power BI, Power Pages and Copilot Studio extend every app.

Azure at the base

Entra ID identity, security, compliance and the global cloud infrastructure.

© 2026 Tertiary Infotech Academy Pte Ltd

THE BENEFITS OF A SHARED DATA STORE

Why Dataverse Matters

1

Easy to manage

Metadata and data are stored together in the cloud — no schema to maintain by hand.

2

Easy to secure

Role-based security controls access to tables, rows and even individual columns.

3

Rich metadata

Data types, relationships and behaviour are used directly by apps and reports.

4

Logic and validation

Business rules, calculated columns, workflows and duplicate detection run in the data layer.

5

Productivity tools

Available as an add-in for Excel and Outlook, so users work where they already are.

6

One source of truth

Change a customer's address once and every app sees it immediately.

© 2026 Tertiary Infotech Academy Pte Ltd

MODULAR — LICENSE WHAT YOU NEED

The Five Customer Engagement Apps

App	What it does	Primary user	Core record
Customer Insights – Journeys	Multi-channel marketing campaigns and customer journeys	Marketer	Journey, segment
Customer Insights – Data	Unifies data from many sources into one customer profile	Data analyst	Unified profile
Sales	Manages the pipeline from lead through to invoice	Seller	Lead, opportunity
Customer Service	Handles customer issues to resolution across channels	Support agent	Case
Field Service	Schedules and completes work at the customer's site	Dispatcher, technician	Work order
Project Operations	Runs project-based sales, resourcing and delivery	Project manager	Project

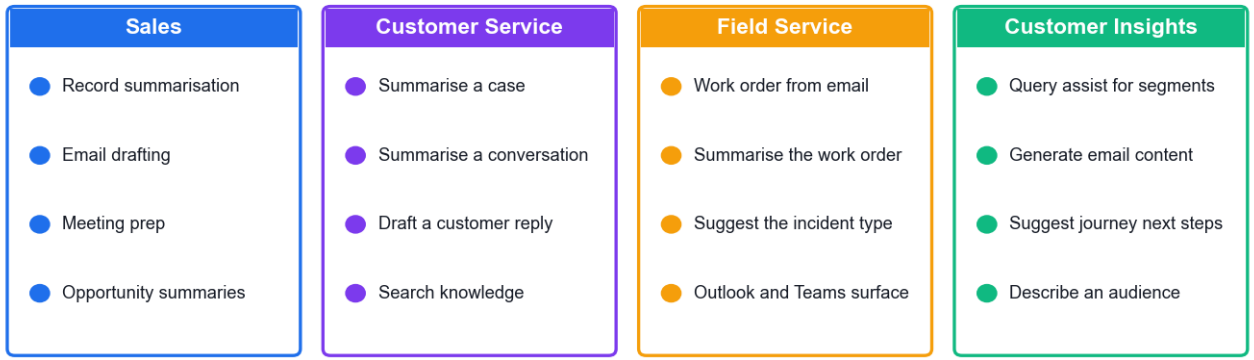

All six share the same Dataverse: a contact created in Sales is the same contact the service agent sees.

© 2026 Tertiary Infotech Academy Pte Ltd

AI EMBEDDED IN EVERY APP

Copilot Across Dynamics 365

Copilot across the customer engagement apps

Natural language in, grounded CRM data out — Copilot reads and writes the same Dataverse rows.

Natural language in

Ask in plain English; Copilot works against your real, permission-trimmed CRM data.

Summarise anything

Records, cases, conversations and long email threads condensed to what matters.

Draft the next action

Emails, replies, work orders and marketing content generated in context.

Always review

Copilot proposes, the human decides — every suggestion is editable before it is saved.

© 2026 Tertiary Infotech Academy Pte Ltd

ONE DATA SET, MANY ENTRY POINTS

Ways to Access Dynamics 365

1

Web browser

The full model-driven app experience — the primary way most users work.

2

Mobile apps

Dedicated Sales and Field Service apps optimised for phones and offline use.

3

Microsoft Outlook

The Dynamics 365 App for Outlook tracks email and shows CRM context in the inbox.

4

Microsoft Teams

The collaboration hub — pin records to channels, chat in context, share files.

5

Power Pages portals

External sites that let customers and partners read and write CRM data safely.

6

Search from anywhere

Dataverse search finds records across tables from a single search box.

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 1 · 45 MIN

Lab 1 — Navigate Dynamics 365 and Explore Dataverse

You are a new CRM analyst at Contoso Coffee Singapore. Before you can advise on CRM investment you must know what is actually deployed. Sign in to the Power Platform admin centre, identify the environment and its Dataverse database, open the Sales Hub and Customer Service Hub apps, and map how the five customer engagement apps share one data store. You finish by recording an environment inventory your team can act on.

1. Sign in to the Power Platform admin center
2. Inspect the environment and its Dataverse database
3. Open the Sales Hub and switch apps from the app launcher
4. Explore Dataverse tables, columns and relationships
5. Record the environment inventory and navigation map

YOU'LL PRODUCE An environment inventory table (environment name, type, region, Dataverse URL, installed CE apps, security roles) plus an annotated navigation map screenshot set.

Tools: Power Platform admin center, make.powerapps.com, Dynamics 365 Sales Hub, Customer Service Hub, Dataverse · Full step-by-step: Learner Guide, Lab 1

© 2026 Tertiary Infotech Academy Pte Ltd

02

TOPIC 02

Shared Activities and Integration Options

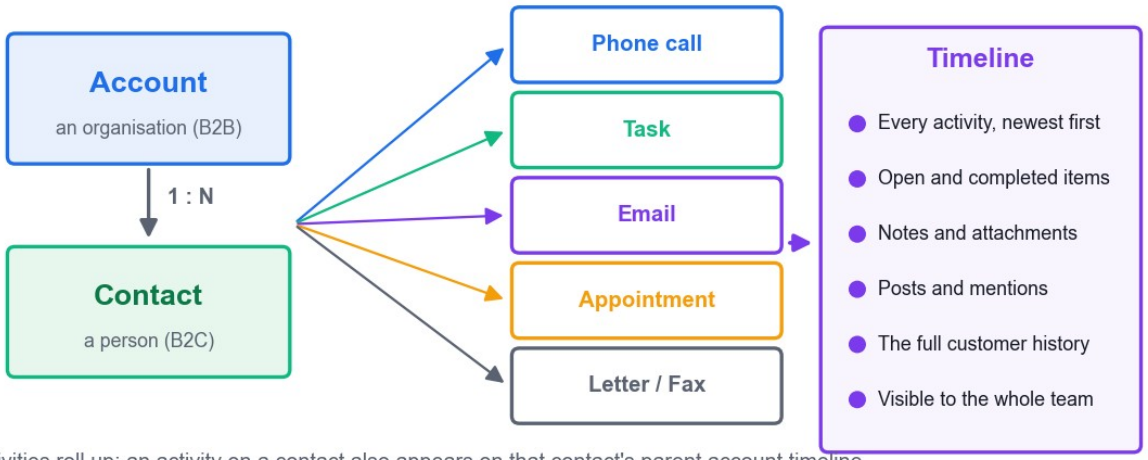

Accounts & contacts · activities · search & filters · views, charts and dashboards · Excel, Teams and Outlook integration

© 2026 Tertiary Infotech Academy Pte Ltd

HOW THE CUSTOMER IS MODELLED

Accounts, Contacts and Activities

How the customer records relate in Dataverse

Activities roll up: an activity on a contact also appears on that contact's parent account timeline.

Account = organisation

The company you do business with — used in B2B scenarios.

Contact = person

An individual — used in B2C, and related to a parent account in B2B.

Hybrid uses both

Most organisations sell to companies AND to individuals; Dynamics 365 supports both at once.

Activities are the history

Phone calls, tasks, emails, appointments, letters and faxes — all on the timeline.

© 2026 Tertiary Infotech Academy Pte Ltd

THREE CUSTOMER MODELS

B2B, B2C and Hybrid

B2B — account-led

- **Business-to-Business (B2B)**
  - You sell to organisations
  - The ACCOUNT is the customer
  - Contacts are the people at that account
  - Longer cycles, multiple stakeholders, quotes and contracts
  - Example: Contoso sells espresso machines to hotel groups

B2C — contact-led

- **Business-to-Consumer (B2C)**
  - You sell to individuals
  - The CONTACT is the customer
  - No parent account required
  - Higher volume, shorter cycles, self-service
  - Hybrid: many organisations run both models in one Dataverse

The Customer lookup field on cases, opportunities and work orders accepts EITHER an account or a contact — that is what makes hybrid possible.

© 2026 Tertiary Infotech Academy Pte Ltd

EVERY TOUCH IS AN ACTIVITY

The Six Activity Types

1

Phone call

An inbound or outbound call — logged with direction, duration and outcome.

2

Task

A to-do with an owner and a due date — the workhorse follow-up activity.

3

Email

Sent, received or drafted — tracked automatically when Outlook integration is on.

4

Appointment

A meeting with a time, duration, location and required/optional attendees.

5

Letter

Physical correspondence recorded for a complete history.

6

Fax

Retained for regulated industries that still require it.

© 2026 Tertiary Infotech Academy Pte Ltd

TWO DIFFERENT JOBS

Filtering vs Searching

Filter

- **Filtering — narrow what you can see**
  - You are already in a view or list
  - Filter on column headers, or use a view's built-in filters
  - Fast, broad results within ONE table
  - Use when: 'show me only the Singapore accounts'

Search

- **Searching — find what you cannot see**
  - Search a View — text search inside the current view
  - Dataverse multi-table search — one box, many tables at once
  - Returns accounts, contacts, cases, activities together
  - Use when: 'find anything mentioning Marina Bay'

Advanced Find sits above both: a visual query designer that builds criteria across related tables and saves the result as a reusable personal view.

© 2026 Tertiary Infotech Academy Pte Ltd

THE REPORTING STACK

Views, Charts and Dashboards

Views

- A saved, filtered list of records from ONE table.
- System views are shared; personal views are yours (and shareable).
- Define the columns, the filter criteria and the sort order.
- The foundation — a chart and a dashboard both start from a view.

Charts

- A visualisation of the data in a view.
- Interactive — click a bar or segment and the underlying list filters to it.
- Column, bar, pie, funnel, line and tag charts.
- Drill down without writing a single query.

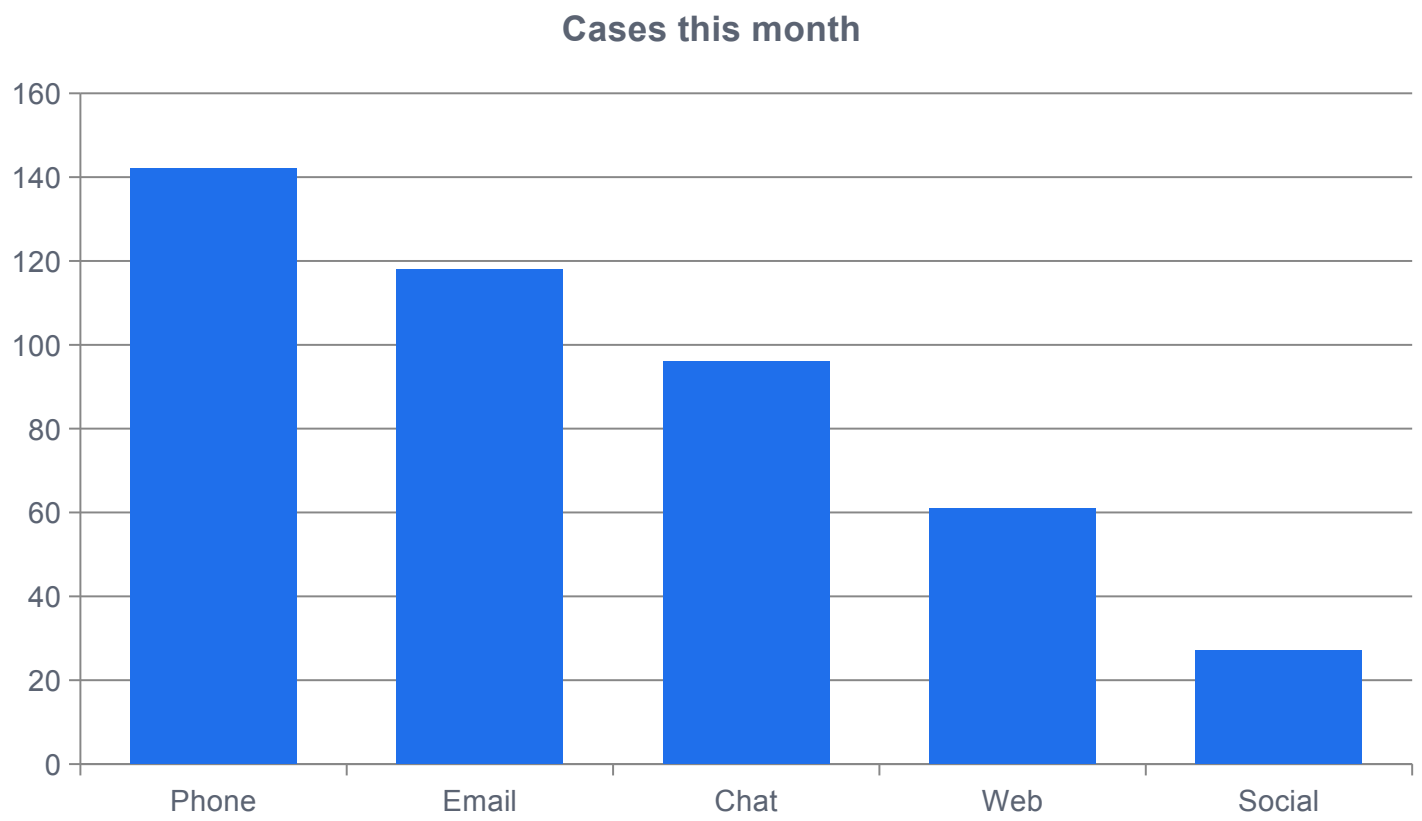

Dashboards

- A combination of charts, views, iframes and web resources.
- Up to six components in one at-a-glance screen.
- System dashboards for the team; personal dashboards for you.
- Power BI goes further: cross-source, richer visuals, scheduled refresh.

© 2026 Tertiary Infotech Academy Pte Ltd

A NATIVE DYNAMICS 365 CHART

Reading a Chart — Cases by Origin

Phone still leads
142 cases — but it is the most expensive channel to staff.

Chat is growing
96 cases at a fraction of the cost per contact.

Social is small
27 cases — but publicly visible, so response time matters most.

The decision
Deflect phone volume to chat and self-service knowledge.

WHAT THE DATA SHOWS Charts are interactive — clicking the Phone column filters the case list to just those 142 records.

© 2026 Tertiary Infotech Academy Pte Ltd

EXPORT THE RIGHT WAY

Excel Integration — Two Modes

Static — a snapshot

- **Static worksheet**
  - A point-in-time snapshot of the data
  - No link back to Dataverse — it never refreshes
  - Use for: an ad-hoc analysis, an emailed extract, an archive
  - Risk: it is stale the moment it is created

Dynamic — a live link

- **Dynamic worksheet / PivotTable**
  - Keeps a live link to the Dataverse data
  - Refresh in Excel to pull the current records
  - Excel templates: pre-built reports with formulas and charts already in place
  - Users get up-to-date reports without knowing Excel formulas

Excel templates let a power user build the report once; everyone else just opens it against their own filtered data.

© 2026 Tertiary Infotech Academy Pte Ltd

MEET USERS WHERE THEY ALREADY WORK

Microsoft Teams and Outlook Integration

1

Teams collaboration hub

Pin a Dynamics 365 record or view into a channel tab so the whole team works from it.

2

Teams file integration

Documents on a record are stored in the connected SharePoint site and surfaced in Teams.

3

Embedded Teams chat

Start a chat about a record from inside Dynamics 365, with the record's context attached.

4

Outlook: track email

Link an email, meeting or appointment to a Dynamics 365 record with a single click.

5

Outlook: see CRM context

View contact, lead and opportunity information in the reading pane without switching apps.

6

Outlook: create records

Add a phone call, task or appointment — or a whole new contact — straight from an email.

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 2 · 60 MIN

Lab 2 — Manage Customers, Activities and Reporting Views

Contoso Coffee Singapore is onboarding a new B2B customer. You create the account and its contacts, log the full set of activities on the timeline, then build the reporting layer your manager needs: a filtered personal view via Advanced Find, a chart from that view, and a dashboard combining both. Finally you export to Excel and confirm the Outlook and Teams integration points.

1. Create the account and its related contacts
2. Log phone, task, email and appointment activities
3. Build a filtered personal view with Advanced Find
4. Create a chart and a personal dashboard from that view
5. Export to Excel and check Teams/Outlook integration

YOU'LL PRODUCE An Account with 3 related Contacts, 4 completed/open activities on the timeline, a saved personal view, a chart, a personal dashboard, and a dynamic Excel export.

Tools: Dynamics 365 Sales Hub, Dataverse, Advanced Find, Excel, Microsoft Teams, Outlook · Full step-by-step: Learner Guide, Lab 2

© 2026 Tertiary Infotech Academy Pte Ltd

03

TOPIC 03

Dynamics 365 Customer Insights – Journeys

Marketing use cases · email marketing · segments and marketing lists · customer journeys · lead generation · forms and events

© 2026 Tertiary Infotech Academy Pte Ltd

THE MARKETING APP

What Customer Insights – Journeys Does

1

Find the right prospects

Identify and score leads so sales spends time on the ones most likely to buy.

2

Run multi-channel campaigns

Email, SMS, push notifications and custom channels from one journey.

3

Nurture with personal journeys

Each contact gets content matched to what they have actually done.

4

Capture leads on forms

Landing pages, subscription centres and forward-to-a-friend forms feed the funnel.

5

Run events end to end

Planning, registration, sessions, speakers, venues and post-event follow-up.

6

Prove the return

Marketing ROI dashboards connect spend to pipeline and revenue.

© 2026 Tertiary Infotech Academy Pte Ltd

TWO MARKETING MODELS

Real-Time vs Outbound Marketing

Real-time — reactive

- **Real-time marketing**
  - TRIGGER-based: reacts to a signal as it happens
  - Journeys start when a contact does something
  - Channels: email, SMS, push, custom
  - Best for: B2C, high volume, behavioural reaction
  - Example: cart abandoned → recovery email in 20 minutes

Outbound — planned

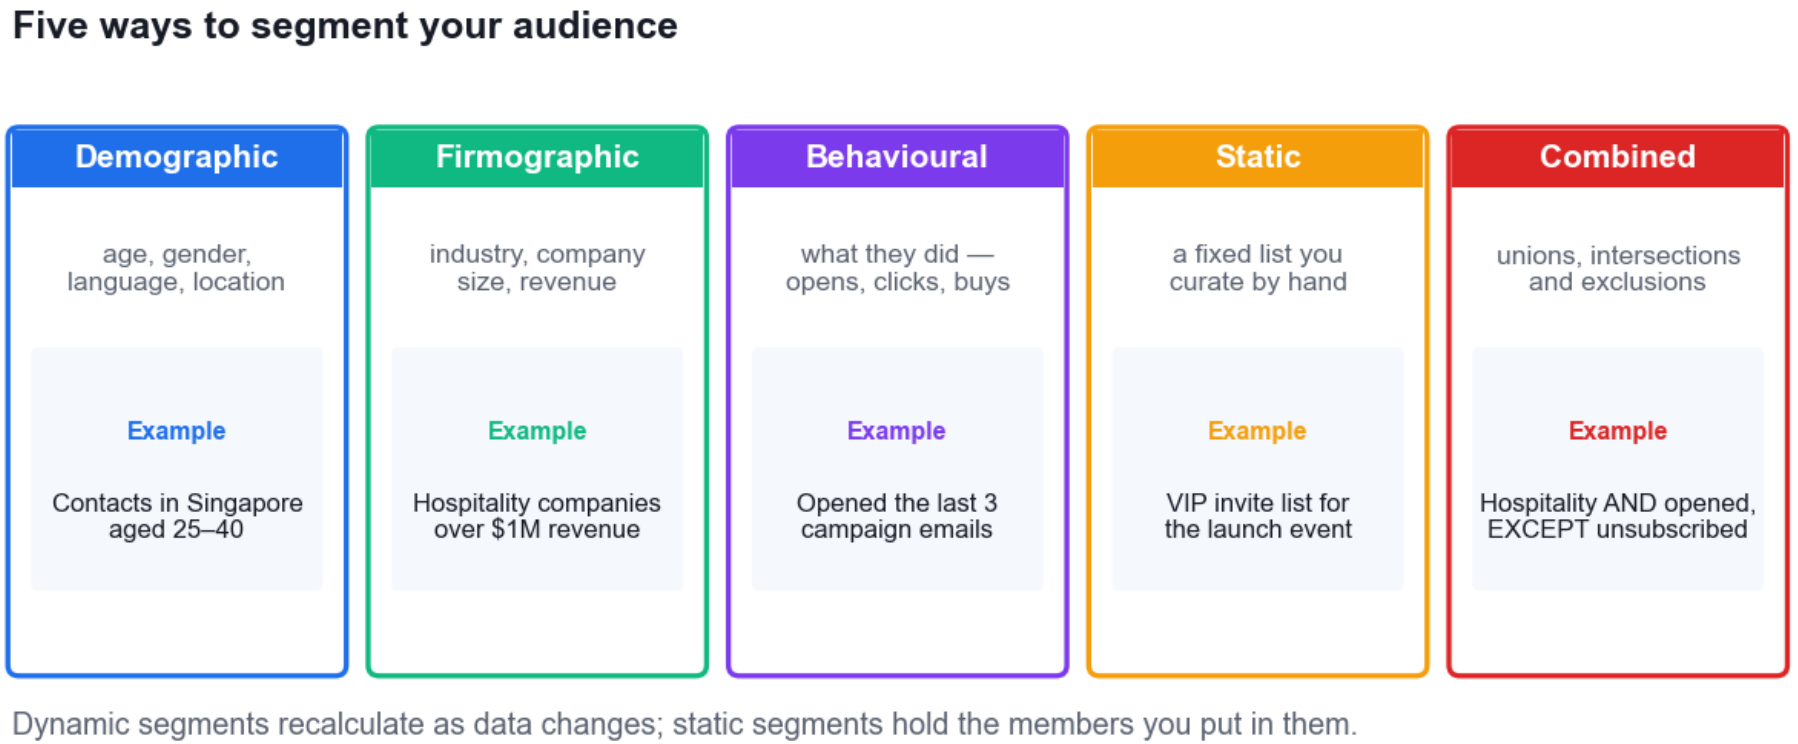

- **Outbound marketing**
  - SEGMENT-based: planned campaigns on a schedule
  - Journeys start when a contact joins a segment
  - Deep B2B features: lead scoring, sales hand-off, LinkedIn
  - Best for: B2B nurture, events, newsletters
  - Example: quarterly product launch to the hospitality segment

Microsoft is consolidating on real-time marketing; know both, because most tenants still run a mix.

© 2026 Tertiary Infotech Academy Pte Ltd

TARGETING

Five Ways to Segment Your Audience

Marketing lists are the static cousin of segments — a fixed membership you curate, carried over from the classic marketing model.

© 2026 Tertiary Infotech Academy Pte Ltd

THE EMAIL DESIGNER

Email Marketing — What the Designer Gives You

1

Drag-and-drop layout

Add and arrange text, images, buttons, dividers and columns without HTML.

2

Brand styling

Fonts, colours, backgrounds and reusable brand profiles keep every send on-brand.

3

Dynamic personalisation

Insert contact fields with fallback values — 'Hi Priya' or 'Hi there' if the name is blank.

4

Conditional content

Show different blocks to different audiences from within one email.

5

Tracked links

Every link is measured — opens and clicks feed journey branches and segments.

6

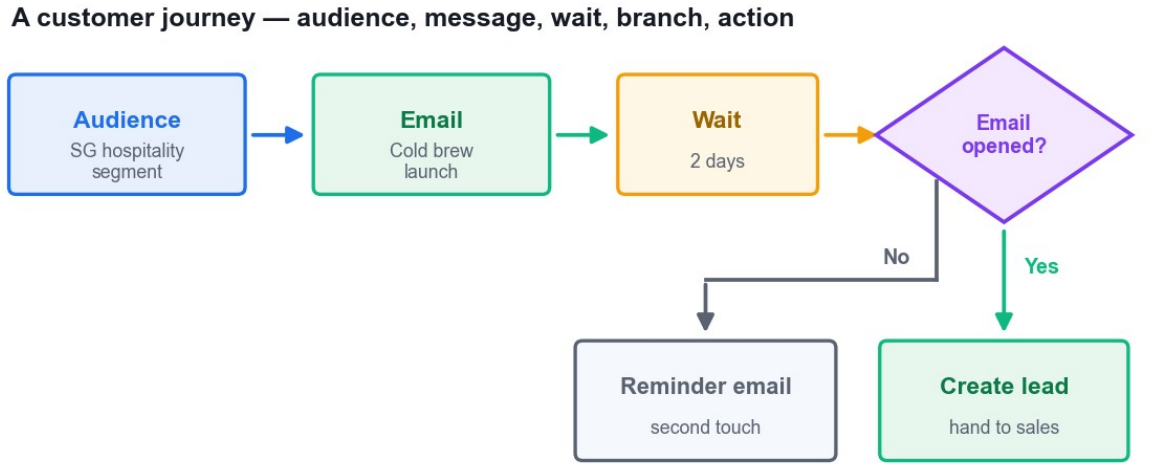

Compliance built in

A physical address and an unsubscribe link are REQUIRED before you can publish.

© 2026 Tertiary Infotech Academy Pte Ltd

THE JOURNEY CANVAS

Designing a Customer Journey

Triggers that start, continue or stop a journey:

Contact created · Email opened · Form submitted · Order placed · Custom triggers

Start with the audience

A segment (planned) or a trigger (reactive) defines who enters the journey.

Add messages

Email, SMS or push — each one a tile the contact receives at that point.

Insert waits

Wait a fixed period, wait until a date, or wait for a specific behaviour.

Branch on behaviour

If/then and split tiles send engaged and unengaged contacts down different paths.

End with an action

Create a lead, run a workflow, launch a LinkedIn campaign or raise a sales activity.

© 2026 Tertiary Infotech Academy Pte Ltd

THE BUILDING BLOCKS

The Journey Tiles You Will Use

Category	Tiles	What it does
Audience	Segment · Form submitted · Record updated	Defines who enters the journey and when
Messages	Email · SMS · Push notification · Custom channel	Sends content on the channel you choose
Branches	If/then · Split	Sends contacts down different paths by condition or percentage
Waits	Wait / delay · Wait for · Wait until	Controls the pacing between steps
Actions	Create lead · Run workflow · LinkedIn campaign · Sales activity	Does something in Dataverse or another system
Triggers	Custom · Interaction · Business	Starts, continues or stops a journey in real time

Triggers are the real-time engine: Contact created welcomes a new user; Email opened drives a follow-up; Order placed starts fulfilment communications.

© 2026 Tertiary Infotech Academy Pte Ltd

FILLING AND PRIORITISING THE FUNNEL

Lead Generation and Qualification

1

Create leads manually

A seller or marketer enters the lead and links it to a new or existing contact.

2

Import from a file

Map a spreadsheet of prospects to leads, contacts or accounts in bulk.

3

Sync from LinkedIn

LinkedIn Lead Gen Forms flow straight into Dynamics 365 as leads.

4

Capture on a marketing form

A landing page form creates the lead the moment it is submitted.

5

Score the lead

Scoring models rank leads by demographic fit and behaviour — sales-ready at a threshold.

6

Hand off to sales

A sales-ready lead is passed to a seller, who qualifies or disqualifies it.

© 2026 Tertiary Infotech Academy Pte Ltd

CAPTURE AND CONVENE

Marketing Forms and Event Management

Forms — capture the lead

- **Three marketing form types**
  - Landing page form — captures new leads and contacts
  - Subscription form — lets people manage their own preferences
  - Forward to a friend — turns a recipient into a referrer
  - Forms can prefill known values and match to existing records

Events — convene the audience

- **Event management covers the whole event**
  - Design the event: venue, capacity, budget, dates
  - Build the agenda: sessions, tracks and a schedule
  - Manage speakers, sponsors and registrations
  - Publish an event website and check attendees in
  - Follow up: attendance data drives post-event journeys

Both feed the same funnel: a form submission or an event registration can trigger a journey and create a lead.

© 2026 Tertiary Infotech Academy Pte Ltd

TOPIC 03 · HANDS-ON LAB

LAB 3 · 60 MIN

Lab 3 — Build a Segment, an Email and a Customer Journey

Contoso Coffee Singapore is launching a cold-brew range to its Singapore hospitality contacts. You build the targeting segment, design a marketing email with dynamic personalisation, wire both into a customer journey with a trigger and a conditional branch, then create the marketing form and event that capture the resulting leads. This is the full marketing framework the course's LO2 requires.

1. Create the audience segment and check its membership
2. Design and personalise the marketing email
3. Build the journey with a trigger and a branch
4. Publish the journey and verify it goes live
5. Create the marketing form and the event registration

YOU'LL PRODUCE A live segment of Singapore hospitality contacts, a published marketing email, a running customer journey with a branch, a marketing form on a landing page, and an event with a registration record.

Tools: Dynamics 365 Customer Insights – Journeys, Dataverse, email designer, segment builder, event management · Full step-by-step: Learner Guide, Lab 3

© 2026 Tertiary Infotech Academy Pte Ltd

04

TOPIC 04

Customer Insights – Data and Customer Voice

Unified customer profiles · data ingestion, unification, enrichment · measures and segments · survey feedback management

© 2026 Tertiary Infotech Academy Pte Ltd

THE PROBLEM IT SOLVES

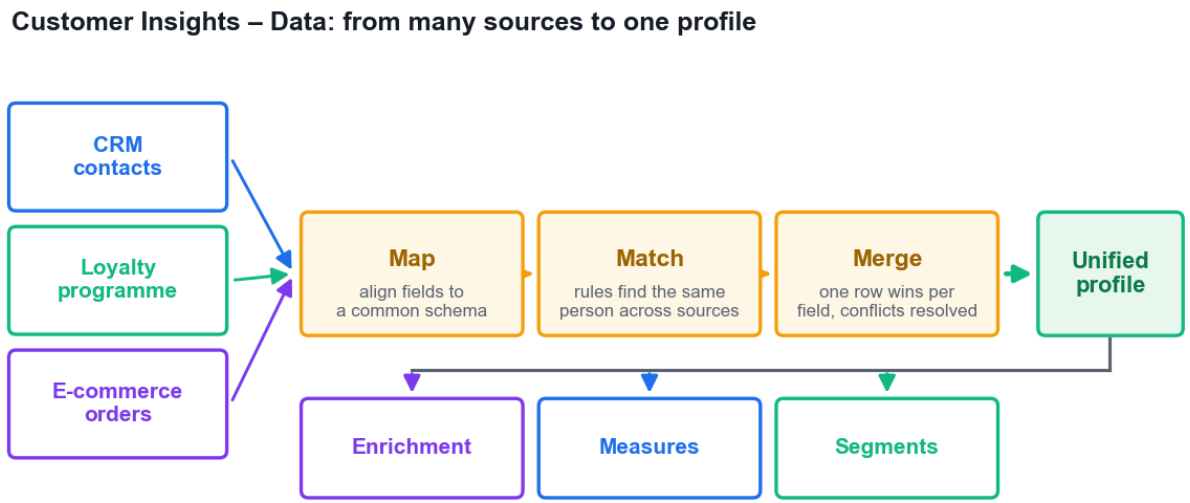

The same person, five different systems.

Customer Insights – Data is the customer data platform that resolves them into one profile you can act on.

© 2026 Tertiary Infotech Academy Pte Ltd

FROM MANY SOURCES TO ONE PROFILE

The Unification Pipeline

Ingest
Connect CRM, ERP, e-commerce, loyalty, web and point-of-sale sources.

Map
Align each source's fields to common semantic types — name, email, phone, address.

Match
Rules decide when two rows are the same person: exact email, then fuzzier fallbacks.

Merge
One value wins per field, using a precedence order you control.

Then activate
Enrich, measure, segment — and push the result into Journeys, Sales and Power BI.

© 2026 Tertiary Infotech Academy Pte Ltd

TURNING A PROFILE INTO INSIGHT

What You Build on the Unified Profile

1

Activities

Mark ingested tables as activities — purchases, tickets, web visits — with a timestamp.

2

Relationships

Define how tables relate to the profile so you can traverse the data.

3

Enrichment

Add brand affinity, interests, demographics and verified addresses from outside sources.

4

Measures

KPIs: customer lifetime value per person, or total revenue across the business.

5

Predictions

Out-of-the-box models for churn risk, product recommendation and subscription churn.

6

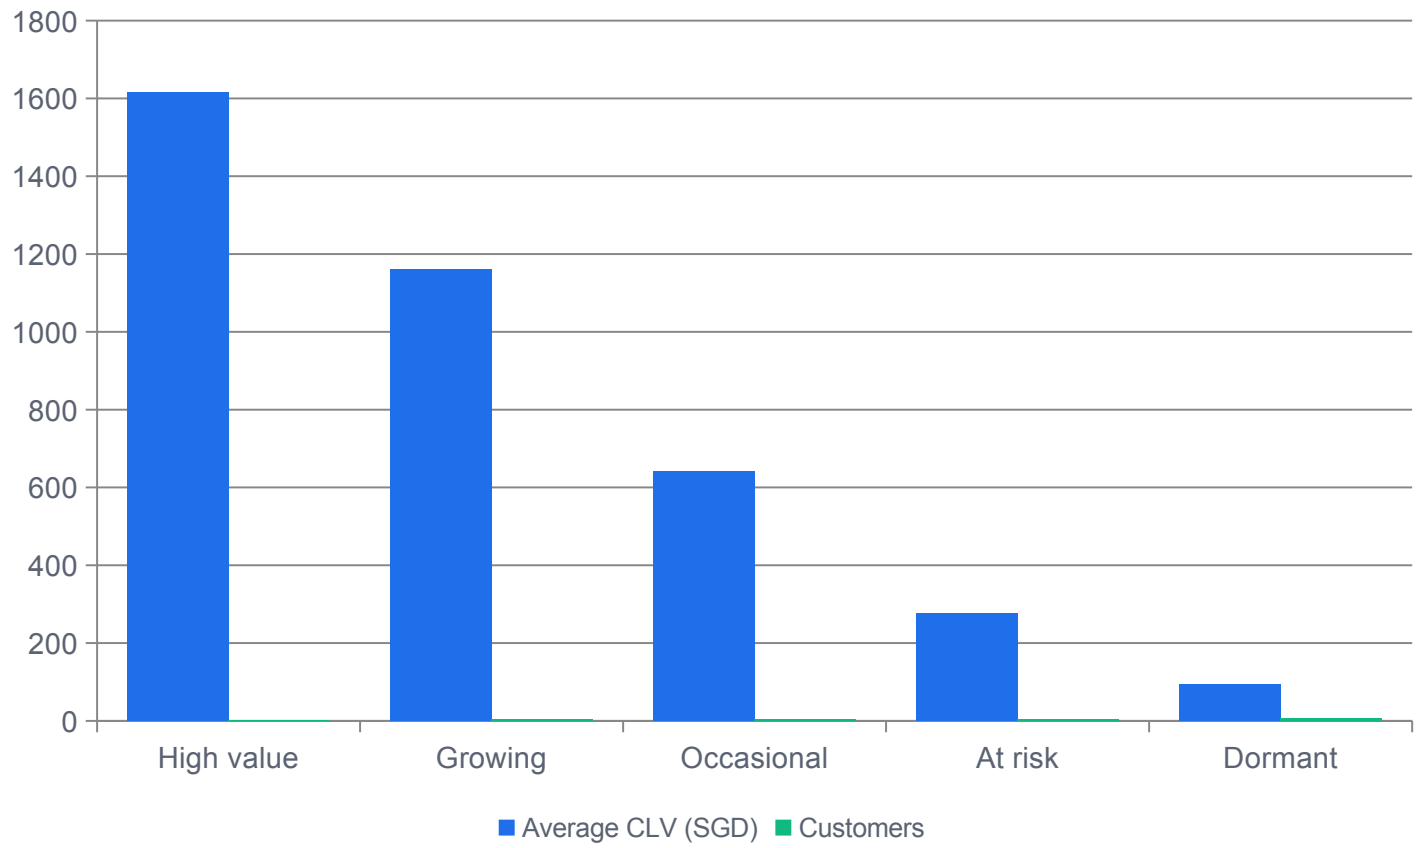

Segments

Audiences built from any profile attribute, measure or activity — ready to activate.

© 2026 Tertiary Infotech Academy Pte Ltd

A MEASURE MADE ACTIONABLE

Customer Lifetime Value by Segment

Measures create segments
'CLV > 500' becomes the High value segment you can market to.

The tail is long
Occasional and dormant customers are the majority by count.

Target the middle
Growing customers respond best to upsell — they already buy.

Act on at-risk
Feed that segment into a win-back journey before they go dormant.

WHAT THE DATA SHOWS The measure defines the segment; the segment drives the journey — this is how data becomes marketing action.

© 2026 Tertiary Infotech Academy Pte Ltd

CAPTURING THE CUSTOMER'S VOICE

Dynamics 365 Customer Voice

1

Enterprise feedback management

Design, distribute and analyse surveys at scale, integrated with Dataverse.

2

Four ways to distribute

Email, a shareable link, a QR code, or embedded in a web page or app.

3

The metrics that matter

Customer satisfaction (CSAT), Net Promoter Score (NPS) and custom sentiment measures.

4

Responses are Dataverse rows

So they appear on the customer record and on service dashboards.

5

Automate the follow-up

A low score can trigger a journey, raise a case or alert an account manager.

6

Close the loop

Feedback drives the decisions — what to fix, what to build, how to serve.

© 2026 Tertiary Infotech Academy Pte Ltd

GETTING RESPONSES YOU CAN TRUST

Survey Design — Six Best Practices

1

Define one objective

Know what decision the results will inform before you write a question.

2

Keep it short

Completion rates fall sharply after about five questions.

3

Create a logical flow

Group related questions; move from general to specific.

4

Organise into pages

Use sections and branching so people only see relevant questions.

5

Preview before you send

Test on desktop AND mobile — most responses arrive on a phone.

6

Set expectations

Say how long it takes and what you will do with the answers.

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 4 · 45 MIN

Lab 4 — Unify Customer Data and Capture Feedback with Customer Voice

Contoso's loyalty data, e-commerce orders and CRM contacts describe the same people under different keys. You walk the Customer Insights – Data unification pipeline to produce one profile per customer, define a lifetime-value measure and a high-value segment, then build and distribute a Customer Voice satisfaction survey and read the results. This gives you the customer insight LO4 asks you to draw.

1. Ingest the three source data sets
2. Map, match and merge to unified profiles
3. Define activities and a lifetime-value measure
4. Build a high-value segment from the measure
5. Create, send and analyse a Customer Voice survey

YOU'LL PRODUCE A unified customer profile set from three sources, a customer lifetime-value measure, a high-value segment, and a published Customer Voice survey with a satisfaction metric.

Tools: Dynamics 365 Customer Insights – Data, Dataverse, Dynamics 365 Customer Voice, Power BI · Full step-by-step: Learner Guide, Lab 4

Explore Dynamics 365 Sales

Sales use cases · the sales lifecycle · leads and qualification · opportunity management · quotes, orders, invoices · business process flows · sales accelerator

© 2026 Tertiary Infotech Academy Pte Ltd

FIVE STAGES, FIVE RECORDS

The Sales Lifecycle

Dataverse record created at each stage

Qualify
A lead is assessed: is there a real need, budget, authority and timeline?

Develop
An opportunity is created with products, estimated revenue, stakeholders and competitors.

Propose
A quote prices the products and is formally presented to the customer.

Close
The customer commits: the quote is won, an order is raised and an invoice issued.

A record at each stage
Lead → Opportunity → Quote → Order → Invoice, each linked to the last.

© 2026 Tertiary Infotech Academy Pte Ltd

TOOLS THAT MOVE DEALS FORWARD

What Dynamics 365 Sales Gives the Seller

1

AI-assisted qualification

Predictive scoring ranks leads and opportunities by likelihood to convert.

2

Tailorable process flows

The organisation's own sales process, enforced at the top of every form.

3

The Assistant

Action cards surface what needs attention today — no deal goes quiet unnoticed.

4

The Timeline

Every call, email, meeting and note against the customer, newest first.

5

Product catalog

Unit groups, price lists and discount lists produce consistent, controlled pricing.

6

Embedded collaboration

Teams, Outlook, SharePoint, OneDrive and Office documents in the flow of work.

© 2026 Tertiary Infotech Academy Pte Ltd

THE CRITICAL DISTINCTION

Leads vs Opportunities

Lead — viability

- **Lead — is this worth pursuing?**

– An unqualified prospect: a name, a company, an interest

– Goal: determine VIABILITY

– Gather information, make contact, decide

– Outcome: Qualified (creates account, contact, opportunity) or Disqualified

– Disqualify reasons: lost, cannot contact, no longer interested, cancelled

Opportunity — revenue

- **Opportunity — how much and when?**

– A qualified deal you are actively working

– Goal: WIN the revenue

– Estimated revenue, close date, products, probability

– Stakeholders, competitors, sales team, quotes

– Outcome: Won (actual revenue recorded) or Lost (with a reason)

Qualifying a lead is a one-way door: Dynamics 365 creates the downstream records and closes the lead as Qualified.

© 2026 Tertiary Infotech Academy Pte Ltd

THE DISCIPLINE THAT WINS DEALS

Managing an Opportunity Well

1

Assign and share

Give it to the right seller or team; add a sales team for collaborative deals.

2

Track products

Line items from the catalog, or write-in products for one-off requirements.

3

Attach literature

Send the customer the right brochures, specs and case studies.

4

Record stakeholders

Who decides, who influences, who blocks — and their role on the deal.

5

Log competitors

Who else is bidding, and the strengths and weaknesses you must answer.

6

Keep the close date honest

The forecast is only as good as the dates sellers maintain.

© 2026 Tertiary Infotech Academy Pte Ltd

SALES ORDER PROCESSING

Quote → Order → Invoice

1. DRAFT quote: build the line items, pricing and discounts
2. ACTIVATE the quote: it becomes read-only and is sent to the customer
3. REVISE if the customer negotiates — this creates a new revision
4. WIN the quote: the customer accepts and an ORDER is created
5. INVOICE the order, then mark it paid — Complete (in full) or Partial

A quote defines pricing and quantities. An order is the customer's commitment to buy. An invoice is the request for payment.

© 2026 Tertiary Infotech Academy Pte Ltd

GUIDING PEOPLE THROUGH THE PROCESS

Business Process Flows

1

Stages and steps

A stage is a phase of work; steps are the fields that must be completed within it.

2

Always visible

The flow sits at the top of the form, so the next action is never in doubt.

3

Consistent execution

New sellers follow the same proven process as the experienced ones.

4

Cross-table

One flow can span lead → opportunity → quote, carrying context across records.

5

Configurable, not code

Business analysts change the process without a developer.

6

The default flow

'Lead to Opportunity Sales Process' — Qualify, Develop, Propose, Close.

© 2026 Tertiary Infotech Academy Pte Ltd

MINIMISING THE TIME BETWEEN SALES ACTIONS

The Sales Accelerator

1

One prioritised work list

The seller opens one screen and knows exactly who to contact next.

2

Sequences

A defined set of consecutive activities — call, wait, email, wait, LinkedIn — applied to records.

3

Multi-channel from one place

Phone, email, SMS and LinkedIn actions without leaving the workspace.

4

Context travels with you

The record, its timeline and the customer's history sit beside the action.

5

Sequence analytics

Monitor which steps convert and which are ignored, then improve the sequence.

6

Less searching, more selling

The measurable win: time spent deciding who to call drops to near zero.

TOPIC 05 · HANDS-ON LAB

LAB 5 · 60 MIN

Lab 5 — Run the Lead-to-Cash Cycle: Lead, Opportunity, Quote, Order

Suzanne Burke of Contoso - Washington has enquired about new espresso equipment. You take that enquiry through the entire sales lifecycle: capture the lead, work the Lead to Opportunity business process flow, qualify it into an opportunity, add products from the catalog, generate a quote, activate and win it, convert to an order and raise the invoice. This is the LO1/LO3 backbone of the course.

1. Create the lead and complete the Qualify stage
2. Log activities and qualify into an opportunity
3. Add catalog products and estimated revenue
4. Create, activate and win the quote
5. Convert to an order and generate the invoice

YOU'LL PRODUCE A qualified lead, an opportunity with product line items and estimated revenue, an activated and won quote, a sales order and an invoice — with the business process flow advanced to Close.

Tools: Dynamics 365 Sales Hub, Dataverse, business process flows, product catalog, quotes, orders, invoices · Full step-by-step: Learner Guide, Lab 5

06

TOPIC 06

Dynamics 365 Sales Capabilities and Related Apps

Sales pipeline and forecasting · Sales Insights (standard vs premium) · LinkedIn Sales Navigator · the Sales mobile app · Microsoft 365 Copilot for Sales

© 2026 Tertiary Infotech Academy Pte Ltd

THE LEADING INDICATOR

Reading the Pipeline

Position = time
Deals are plotted by estimated close date — the near-term crunch is visible instantly.

Size = value
The bigger the circle, the bigger the deal. Two big circles can outweigh twenty small ones.

Colour = confidence
Rating or predictive score — hot deals in one colour, cold in another.

What to look for
A quarter with no large deals closing is a forecast problem you can still fix.

© 2026 Tertiary Infotech Academy Pte Ltd

PREDICTING THE PERIOD

Forecasting the Quarter

Forecast categories

Pipeline, Best Case, Committed, Won and Omitted — each opportunity sits in one.

Roll-up by hierarchy

Seller → manager → director, so every level sees its own number.

Adjustments are tracked

A manager's override is recorded separately from the system roll-up.

The gap is the message

Won + Committed against quota tells you how hard the rest of the quarter is.

© 2026 Tertiary Infotech Academy Pte Ltd

WHO DEPENDS ON THE NUMBER

Why Accurate Forecasting Matters

1

Sellers

Know whether they will hit quota with time left to do something about it.

2

Sales managers

Spot the gap early, reallocate effort, and coach the deals that matter.

3

Sales leaders

Commit a number to the business that operations and finance can plan against.

4

Enablement managers

See which behaviours and sequences actually correlate with won deals.

5

The business

Inventory, hiring and cash flow all depend on the forecast being believable.

6

The test

Compare committed forecast to actual won, period after period — that is forecast accuracy.

© 2026 Tertiary Infotech Academy Pte Ltd

THE INVESTMENT DECISION

Sales Insights — Standard vs Premium

Feature	Standard (included)	Premium (licensed)	What it gives you
Assistant	Yes	With Studio	Action cards telling the seller what needs attention
Auto capture	Basic	Premium	Suggests untracked emails and meetings for the timeline
Email engagement	Yes	Yes	Open, click and reply tracking on sent emails
Sequences	Yes	Yes	Consecutive activity sets applied to leads and opportunities
Relationship analytics	—	Yes	Health scores and KPIs on every customer relationship
Predictive lead scoring	—	Yes	AI ranks leads by likelihood to convert
Predictive opportunity scoring	—	Yes	AI ranks open deals by likelihood to close
Conversation intelligence	—	Yes	Analyses sales calls for sentiment, keywords and coaching

This table IS the investment recommendation: which premium capabilities solve a problem you actually have?

© 2026 Tertiary Infotech Academy Pte Ltd

THE PERSON BEHIND THE RECORD

LinkedIn Sales Navigator Integration

1

Top card

Headline profile information for the lead or account, embedded in the D365 form.

2

News and icebreakers

Recent activity and shared interests that give the seller a reason to reach out.

3

Connections

See who in your organisation already knows this person — and ask for an introduction.

4

Related leads

Other decision-makers at the same account you have not yet engaged.

5

Recommended leads

Sales Navigator suggests prospects matching your ideal customer profile.

6

Job-change alerts

A contact moving to a new company is a new opportunity — and a churn risk.

© 2026 Tertiary Infotech Academy Pte Ltd

SELLING AWAY FROM THE DESK

Mobile and Copilot for Sales

Mobile — the field

- **Dynamics 365 Sales mobile app**

– Plan your day — bookings, tasks and priorities on one screen

– Prepare for meetings — the customer's history before you walk in

– Post-meeting work — capture notes by voice, create follow-ups

– Join online meetings directly from the app

– Built for the field seller who is rarely at a desk

Copilot — the inbox

- **Microsoft 365 Copilot for Sales**

– Works INSIDE Outlook and Teams — no app switching

– Summarise a long email thread or a meeting recording

– Draft a reply grounded in the CRM record

– Save updates back to Dynamics 365 without opening it

– Removes the manual data entry sellers most resent

Both target the same problem: sellers spend too much time on admin and not enough with customers.

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 6 · 45 MIN

Lab 6 — Forecast the Pipeline and Evaluate Sales Insights

Your sales director wants to know whether to buy the Sales Insights premium add-on. You build the pipeline view and a forecast, work the sales accelerator list, examine which Sales Insights features are included versus licensed, review the LinkedIn Sales Navigator and mobile experiences, and produce a written investment recommendation — exactly the evidence LO5 requires.

1. Import the pipeline data and open the pipeline chart
2. Configure and read a sales forecast
3. Work the sales accelerator list and apply a sequence
4. Compare Sales Insights standard vs premium features
5. Write the investment recommendation

YOU'LL PRODUCE A pipeline chart and forecast for the current period, a sales accelerator work list with a sequence applied, a completed standard-vs-premium feature comparison, and a one-page investment recommendation.

Tools: Dynamics 365 Sales Hub, Sales Insights, forecasting, sales accelerator, LinkedIn Sales Navigator, Copilot for Sales, Power BI · Full step-by-step: Learner Guide, Lab 6

TOPIC 07

Explore Dynamics 365 Customer Service

Service use cases · the case lifecycle · SLAs and entitlements · workload management, queues and routing · business process flows · knowledge management

© 2026 Tertiary Infotech Academy Pte Ltd

EQUIPPING THE AGENT TO RESOLVE

What Dynamics 365 Customer Service Does

1

Track issues as cases

Every customer problem becomes a case record with a full interaction history.

2

Share knowledge

A knowledge base agents search and customers self-serve from.

3

Route work intelligently

Queues and routing rules put each case in front of the right person.

4

Enforce service levels

SLAs put a measurable clock on first response and resolution.

5

Define what is covered

Entitlements record how much support the customer has actually bought.

6

Measure and improve

Dashboards and historical analytics show where service is working and where it is not.

© 2026 Tertiary Infotech Academy Pte Ltd

MANY INDUSTRIES, ONE PATTERN

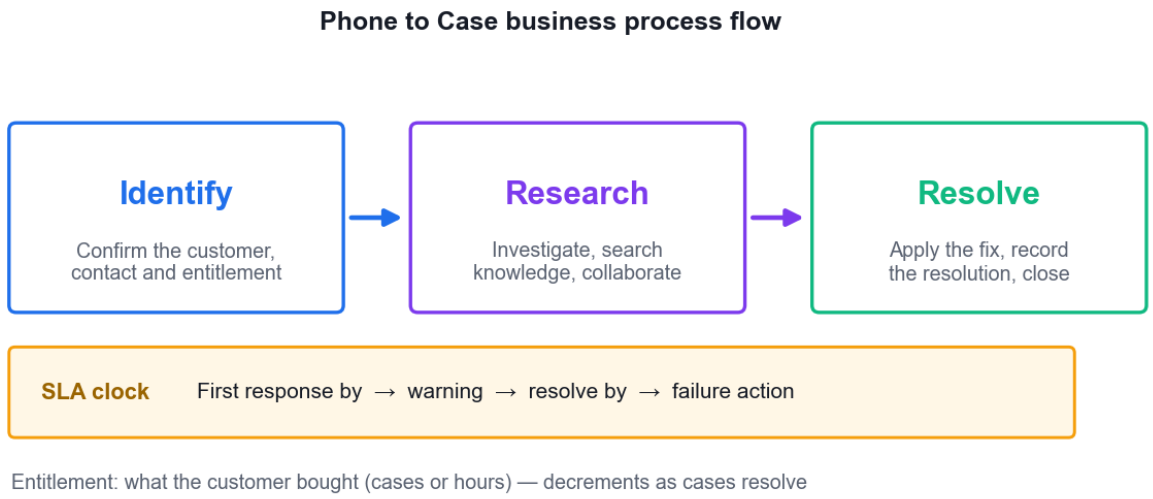

Where Customer Service Is Used

Scenario	What they handle	Why Dynamics 365 fits
Contact centre	High-volume inbound calls, chat and email	Omnichannel routing, session management, agent scripts
Service centre	Repairs and servicing at a facility	Case tracking with parts, entitlements and warranty terms
Internal IT helpdesk	Employee technology issues	Queues, SLAs, knowledge base and self-service portal
HR service desk	Employee policy and benefit questions	Confidential cases with role-based security
Warranty support	Claims against a purchased product	Entitlements, customer assets and case resolution history

© 2026 Tertiary Infotech Academy Pte Ltd

PHONE TO CASE BUSINESS PROCESS FLOW

The Case Lifecycle

Identify

Confirm the customer and contact, check the entitlement, understand the issue.

Research

Investigate, search knowledge, collaborate with colleagues, escalate if needed.

Resolve

Apply the fix, record the resolution type and billable time, close the case.

The SLA runs alongside

First response and resolution clocks with warning and failure actions.

The entitlement decrements

Each resolved case consumes one of the customer's purchased terms.

© 2026 Tertiary Infotech Academy Pte Ltd

TWO WAYS TO MANAGE SERVICE LEVEL

SLAs and Entitlements — Not the Same Thing

SLA — how fast

- **Service Level Agreement (SLA)**
  - A TIME commitment: how fast you will respond and resolve
  - KPIs: First Response By, Resolve By
  - Warning action fires before the deadline
  - Failure action fires when it is breached
  - Can differ by priority, customer tier or channel

Entitlement — how much

- **Entitlement**
  - A QUANTITY commitment: how much support they bought
  - Allocated by number of cases OR number of hours
  - Has a start date, end date and remaining balance
  - Can be restricted to specific channels or products
  - Covers warranties, service contracts and incident packs

A gold customer might have a 1-hour SLA and a 50-case entitlement; a bronze customer 24 hours and 10 cases.

© 2026 Tertiary Infotech Academy Pte Ltd

SIX ROUTES INTO THE QUEUE

How Cases Get Created

1

Manually by an agent

The agent takes a call and creates the case as they talk to the customer.

2

Automatic record creation

Rules turn inbound email, social posts or IoT alerts into cases without human touch.

3

Customer self-service

A portal or a bot lets the customer raise the case themselves, any hour.

4

From a conversation

An Omnichannel chat or call escalates into a case with the transcript attached.

5

From a work order

A field visit that reveals a second problem raises a new case.

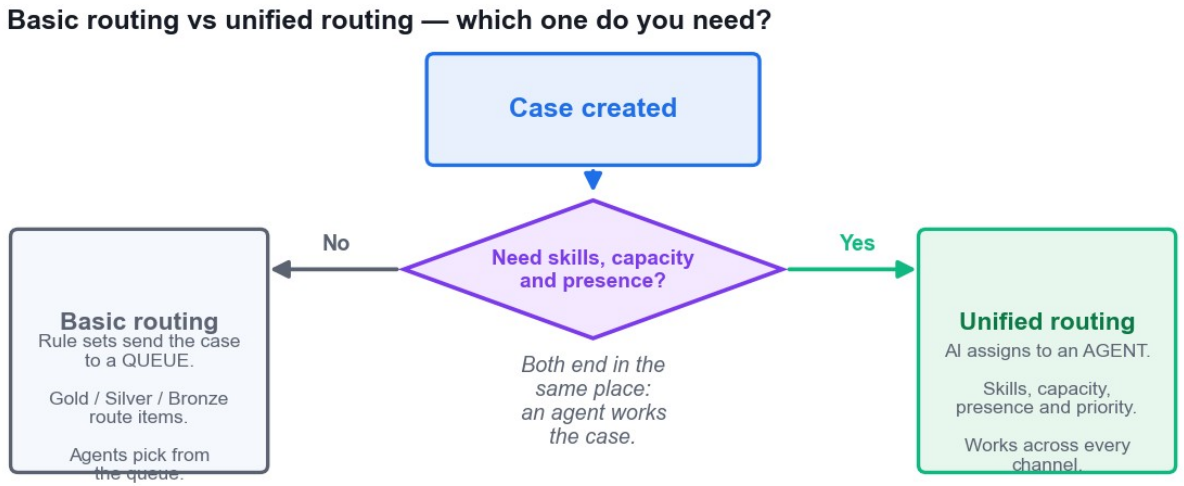

6

Via API or integration

Another system (ERP, monitoring, partner portal) creates cases programmatically.

© 2026 Tertiary Infotech Academy Pte Ltd

Queues and Routing

Queues hold the work

Cases sit in a queue until an agent picks one or is assigned it.

Basic routing → a queue

Rule sets (Gold / Silver / Bronze) direct the case to the right queue by criteria.

Unified routing → an agent

AI assigns work using skills, capacity, presence and priority, across every channel.

Choose by complexity

Small team, one channel? Basic. Skills-based, multi-channel? Unified.

© 2026 Tertiary Infotech Academy Pte Ltd

SCALING THE ANSWER

Knowledge Management

1

Create and design

Rich-text articles with images, videos, attachments and structured templates.

2

Manage the lifecycle

Draft → review → approve → publish, with scheduled publication dates.

3

Version history

Major and minor versions; retire an article without losing the record.

4

Translate

Language variants so global teams and customers get the same answer.

5

Search from the case

The knowledge pane pre-searches using the case title — no retyping.

6

Link, email or share

Attach the article to the case, email it to the customer, or publish it to the portal.

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 7 · 60 MIN

Lab 7 — Resolve a Case with Knowledge, Queues, SLAs and Entitlements

Alpine Ski House has received a damaged espresso machine. You author and publish the knowledge article that answers it, create the case, route it through a queue, watch the SLA clock, apply an entitlement, work the Phone to Case business process flow, attach the article and resolve the case. This is the complete service lifecycle behind LO1 and LO3.

1. Author and publish the knowledge article
2. Create the case and set its customer and origin
3. Route it to a queue and apply the SLA and entitlement
4. Work the Phone to Case BPF and attach the article
5. Resolve the case and check the resolution record

YOU'LL PRODUCE A published knowledge article, a case routed through a queue with an SLA and an entitlement applied, advanced through all three BPF stages and resolved with the article linked.

Tools: Dynamics 365 Customer Service Hub, Dataverse, knowledge management, queues, routing rules, SLAs, entitlements · Full step-by-step: Learner Guide, Lab 7

08

TOPIC 08

Customer Service Capabilities and Related Apps

Omnichannel for Customer Service · supervisor experiences and Omnichannel Insights · Customer Voice for service · reporting and data visualisation

© 2026 Tertiary Infotech Academy Pte Ltd

EVERY CHANNEL, ONE WORKSPACE

Omnichannel for Customer Service

1

Live chat

Website and app chat, with proactive invitations based on visitor behaviour.

2

SMS

Two-way text conversations through supported SMS providers.

3

Voice

A full cloud contact centre — inbound and outbound calling with transcription.

4

Social channels

Facebook, WhatsApp, LINE, WeChat and Twitter/X in the same workspace.

5

Microsoft Teams

Support employees and partners in the tool they already use all day.

6

Entity/record channels

Email and case records handled beside the live conversations.

© 2026 Tertiary Infotech Academy Pte Ltd

PRODUCTIVITY IN THE CONVERSATION

What the Agent Workspace Gives You

1

Session management

Each conversation is its own session with its own tabs — several at once, no lost context.

2

Real-time notifications

Incoming work arrives with the customer's context already attached.

3

Customer context

Who they are, their history, their entitlement and their open cases, at a glance.

4

AI conversation summary

Copilot condenses a long chat so the next agent is up to speed immediately.

5

Smart assist

Suggests relevant knowledge articles and similar resolved cases as the conversation unfolds.

6

Agent scripts and macros

Guided steps and one-click automations for the procedures that must be exact.

© 2026 Tertiary Infotech Academy Pte Ltd

THE FIRST LINE OF SUPPORT

Bots and Escalation

Bot — deflect

- **What the bot handles**
  - Password resets, order status, opening hours, simple how-to
  - Available 24/7 at near-zero marginal cost
  - Built in Microsoft Copilot Studio, no code required
  - Deflects routine volume so humans handle the hard cases

Human — resolve

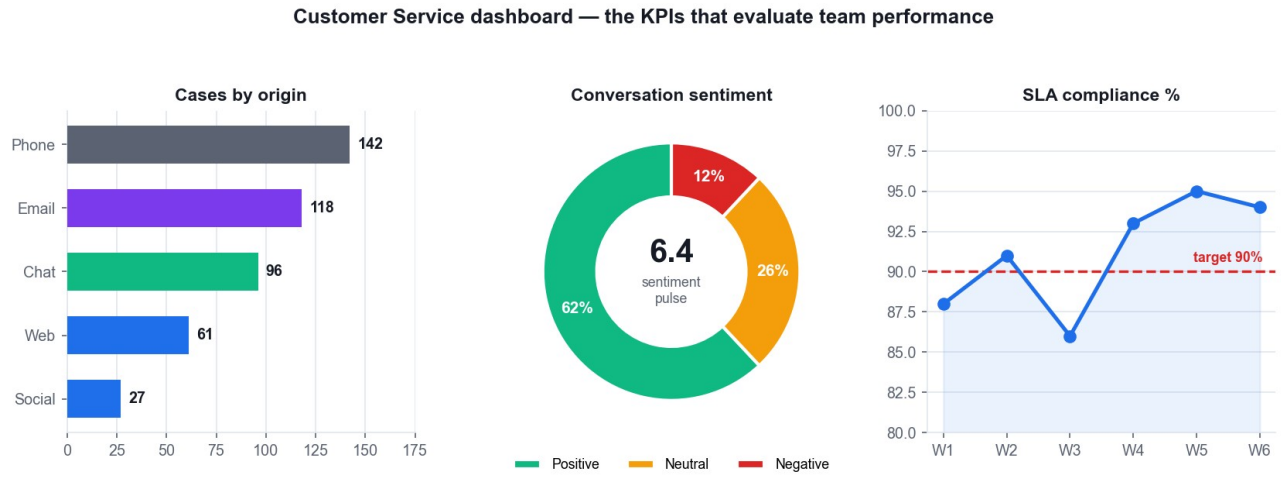

- **What happens on escalation**
  - The bot hands off to a human agent in the same conversation
  - The FULL transcript travels with it — the customer never repeats themselves
  - Skills-based routing picks the right agent for the topic
  - The bot report tells you the deflection rate you are achieving

Measure deflection honestly: a bot that frustrates customers into abandoning is not deflecting, it is losing them.

© 2026 Tertiary Infotech Academy Pte Ltd

EVALUATING TEAM PERFORMANCE

The Service Dashboard

Volume by channel

Where the work is coming from — and which channels cost the most to staff.

Sentiment in near real time

Average sentiment pulse plus the positive/neutral/negative split.

SLA compliance trend

The percentage met, week by week, against the target you committed to.

Supervisors can intervene

Monitor, assign, transfer or force-close a conversation going wrong.

Filters and bookmarks

Save a filtered view of the dashboard you return to every morning.

© 2026 Tertiary Infotech Academy Pte Ltd

HISTORICAL ANALYTICS

Which Report Answers Which Question

Management question	Report	Key metric
Are we handling more cases than last month?	Customer Service – Summary	Case volume, resolution rate
Which agent needs coaching?	Customer Service – Agent	Cases handled, average handle time
What are customers contacting us about?	Case Topics	AI-clustered case themes
Is the bot deflecting enough?	Omnichannel – Bot	Bot resolution and escalation rate
Are customers waiting too long?	Omnichannel – Queue	Average wait time, abandon rate
Are conversations turning negative?	Sentiment Analysis	Average sentiment pulse, % negative
Are customers satisfied after resolution?	Customer Voice	CSAT and Net Promoter Score

Three Customer Service reports (Summary, Agent, Case Topics) and five Omnichannel reports (Conversation, Queue, Agent, Bot, Topics).

© 2026 Tertiary Infotech Academy Pte Ltd

09

TOPIC 09

Explore Dynamics 365 Field Service

Field service use cases · the work order lifecycle · inspections · the Field Service mobile app

© 2026 Tertiary Infotech Academy Pte Ltd

THE DEFINITION

Field service is any service performed away from your own facility.

Another way to say it: mobile workforce management — getting the right technician, with the right parts and skills, to the right place at the right time.

© 2026 Tertiary Infotech Academy Pte Ltd

CAPABILITIES

What Field Service Delivers

1

Work order management

Define exactly what work must be done, for whom, when and with what.

2

Scheduling and dispatch

Match the work to a qualified, available resource who is near enough to get there.

3

Communication tools

Keep the customer informed — appointment reminders, technician tracking, arrival notices.

4

Inventory and returns

Track parts on vans and at warehouses; handle returns and warranty claims.

5

Asset and contract management

Know what equipment the customer owns and what agreement covers it.

6

Analytics and reporting

First-time fix rate, travel time, on-time arrival — the metrics that pay for the system.

© 2026 Tertiary Infotech Academy Pte Ltd

SIX ORIGINS

Where Work Orders Come From

1

A sales process

The service was sold as part of the deal — installation, commissioning, training.

2

An escalated case

Customer Service could not fix it remotely, so a technician must attend.

3

A customer request

Raised through a portal, an app or a phone call to the service desk.

4

A maintenance agreement

Scheduled preventive maintenance generated automatically from the contract.

5

An IoT alert

A connected device reported a fault — Connected Field Service raises the work order.

6

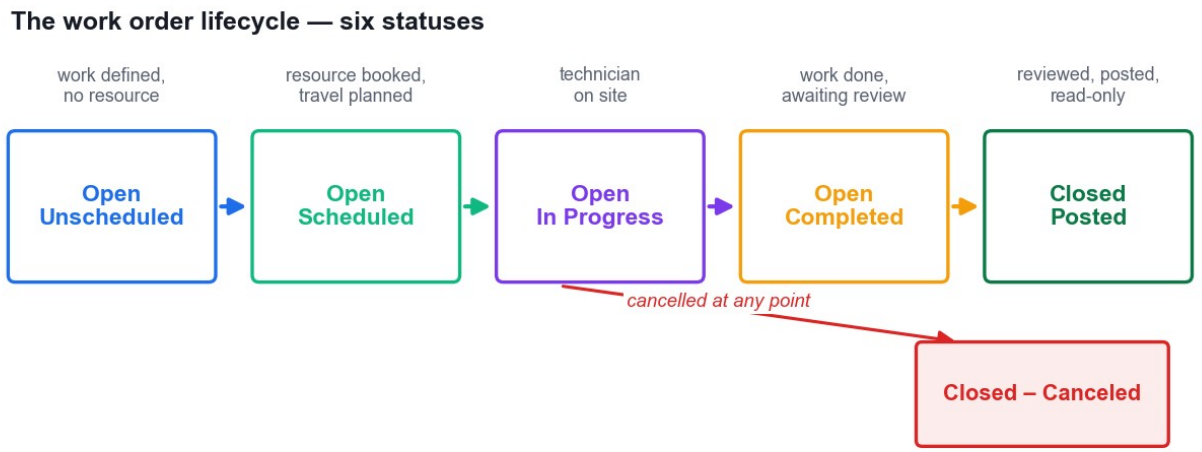

An inspection follow-up

A previous inspection or audit found something that needs fixing.

© 2026 Tertiary Infotech Academy Pte Ltd

SIX STATUSES

The Work Order Lifecycle

Open – Unscheduled
The work is defined but nobody is booked. It sits in the dispatcher's queue.

Open – Scheduled
A resource is booked with a time slot and a travel plan.

Open – In Progress
The technician has arrived and started work; actual times are recorded.

Open – Completed
The work is done, awaiting review and posting.

Closed – Posted
Reviewed, products and services posted, read-only. Or Closed – Canceled.

© 2026 Tertiary Infotech Academy Pte Ltd

ANATOMY OF THE CENTRAL RECORD

What a Work Order Carries

1

Service account and address

Who the work is for and exactly where — geo-coded for travel calculation.

2

Incident type

The kind of problem, which pre-populates duration, required skills, tasks and products.

3

Service tasks

The checklist of what the technician must actually do, with estimated durations.

4

Products and services

Parts expected to be used and the labour to be billed.

5

Time windows

Promised From and Promised To — the appointment window given to the customer.

6

Priority and territory

Drives scheduling urgency and which team of resources can be considered.

© 2026 Tertiary Infotech Academy Pte Ltd

WHAT THE TECHNICIAN ACTUALLY TOUCHES

Inspections and the Mobile App

Inspections — the data

- **Inspections are digital forms**

– Drag-and-drop question sets: yes/no, number, text, photo, single/multi-select

– Easier to create than the old service task model

– Faster to fill in on a phone, and works offline

– Must be PUBLISHED before use; edits create a new version

– Responses are reportable data, not a scanned paper form

Mobile — the tool

- **The Field Service mobile app**

– Built on Power Platform — configurable without code

– The day's bookings, routes and work order details

– Customer asset history: what was done here before

– Guided inspections, photo capture, parts used, signature

– Offline capability — the basement with no signal still works

Together they raise the first-time fix rate: the technician arrives knowing the history and leaves with the evidence captured.

© 2026 Tertiary Infotech Academy Pte Ltd

LAB 9 · 55 MIN

Lab 9 — Create and Complete a Work Order with an Inspection

A Contoso customer's espresso machine has failed on site. You create the work order with its incident type, products and services, attach a digital inspection the technician must complete, then drive the work order through its full status lifecycle from Open–Unscheduled to Closed –Posted, reviewing the mobile experience the technician would actually use.

1. Create the work order and set its incident type
2. Add service tasks, products and services
3. Build and attach the digital inspection
4. Progress the work order through its statuses
5. Review the mobile technician experience

YOU'LL PRODUCE A work order with an incident type, service tasks, products and services, a published inspection attached and completed, driven through every lifecycle status to Closed–Posted.

Tools: Dynamics 365 Field Service, Dataverse, incident types, inspections, Field Service mobile app · Full step-by-step: Learner Guide, Lab 9

WHAT A SCHEDULING SOLUTION MUST ANSWER

The Five Scheduling Questions

1

Is it ready to schedule?

Are the parts available, is the site accessible, has the customer confirmed?

2

Who is QUALIFIED?

Which resources hold the required characteristics — certifications and skills?

3

Who is AVAILABLE?

Whose working hours and existing bookings leave room in the promised window?

4

Who is NEAREST?

Travel time is unbillable cost — proximity is money.

5

What does it COST?

Some resources are more expensive; some jobs justify the premium.

6

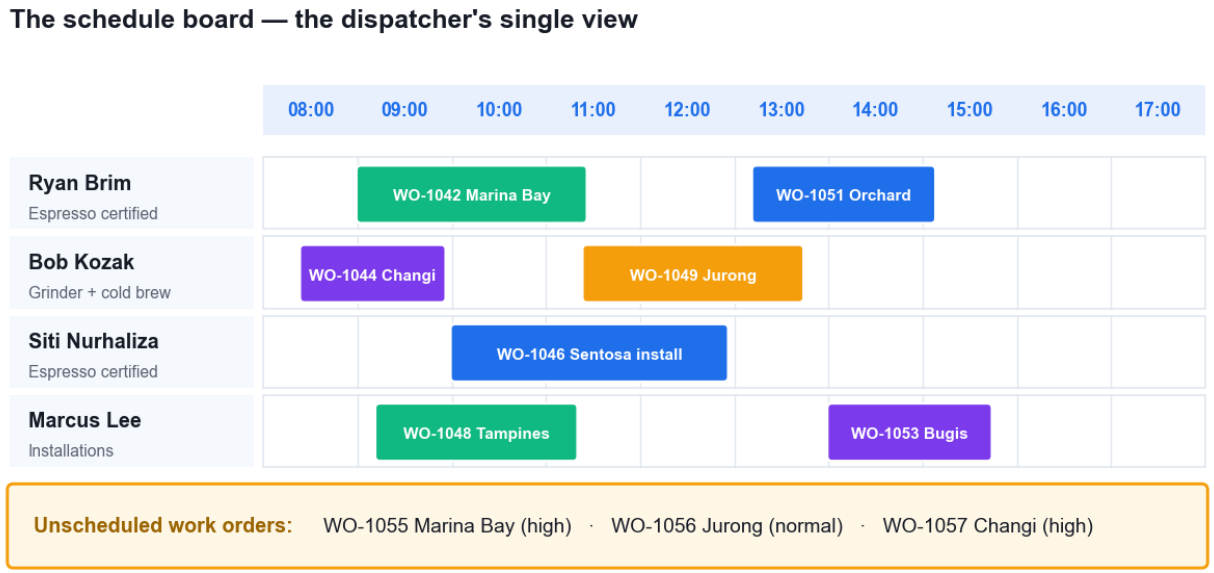

Answer all five, fast

A dispatcher may make hundreds of these decisions a day.

© 2026 Tertiary Infotech Academy Pte Ltd

THE DISPATCHER'S SINGLE VIEW

The Schedule Board

Resources down, time across

Every technician's day laid out on one grid.

Bookings are the blocks

Drag to move, right-click to substitute or reschedule.

The requirements panel

Unscheduled work orders waiting at the bottom, ready to be assigned.

The map view

See where resources and jobs are, so travel decisions are visual.

Filters keep it manageable

By territory, skill, resource type or booking status.

© 2026 Tertiary Infotech Academy Pte Ltd

MANUAL → ASSISTED → AUTOMATED

Three Ways to Schedule

Method	How it works	Best for	Trade-off
Manual	Drag the requirement onto a resource's row on the board	Urgent jobs, known preferences, small teams	Bypasses constraint checking — you can double-book
Schedule assistant	Filters by skill, territory, availability and proximity, then ranks candidates	Most day-to-day scheduling	One booking at a time; still a human decision
Resource Scheduling Optimization	Runs on a schedule and optimises many bookings at once	Large teams, dense routes, changing conditions	Extra licence; needs well-maintained data to trust

Most organisations run all three: optimisation for the routine bulk, the assistant for exceptions, manual for emergencies.

© 2026 Tertiary Infotech Academy Pte Ltd

THE THREE MOVES AND WHEN TO USE THEM

Dispatcher Moves When Plans Change

1

Move

Drag the booking to a different time or day — same resource, new slot.

2

Substitute Resource

Find Substitution ranks other qualified resources and transfers the booking.

3

Rebook

Send the requirement back through the schedule assistant for a fresh slot.

4

Technician sick?

Substitute — the work still needs the same skills, just a different person.

5

Customer wants later?

Move — the resource is fine, only the time changes.

6

Emergency job?

Rebook the displaced routine work, then schedule the emergency.

TRACKING THE EQUIPMENT OVER ITS LIFE

Customer Assets

1

See every asset per customer

All the equipment they own, in one list on the account.

2

Know where it is

Which site, which floor, which room — so the technician finds it.

3

Track work against it

Every work order ever raised on THAT specific unit, by serial number.

4

Build a hierarchy

A machine with its boiler, grinder and pump as child assets.

5

Record the specifics

Model, serial number, install date, warranty end, service history.

6

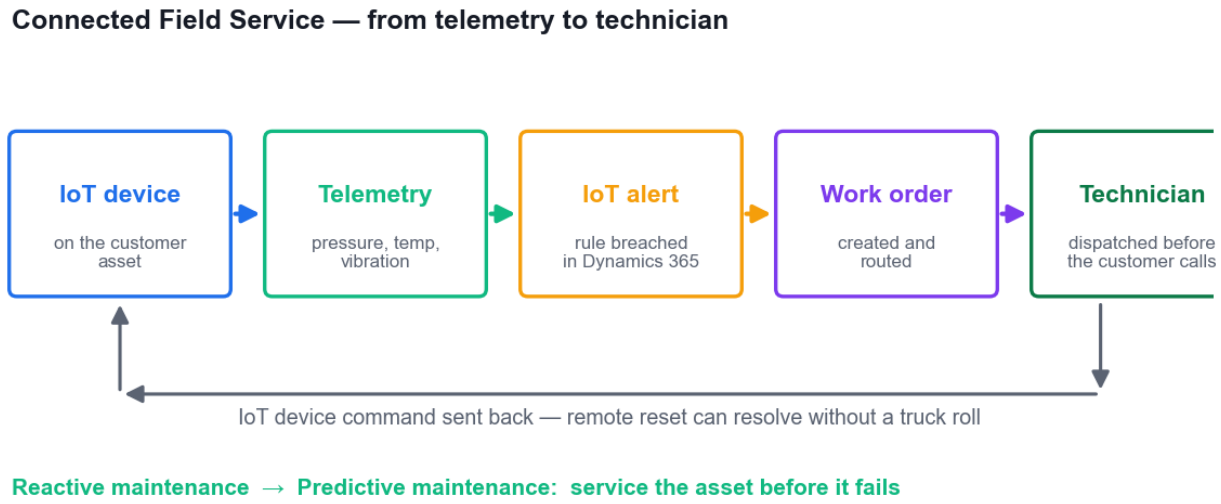

Inform the next visit

The technician arrives already knowing what was done last time and why.

FROM REACTIVE TO PREDICTIVE

Connected Field Service

Device on the asset

An IoT device registered in Azure IoT Hub and linked to the customer asset.

Telemetry streams in

Pressure, temperature, vibration, usage — continuously.

Rules raise alerts

A breach creates an IoT Alert record in Dynamics 365.

The alert creates work

Automatically, or after a human triages it — a work order with the asset attached.

Or fix it remotely

An IoT device command can reset the equipment without sending anyone.

THE MOVING PARTS

The Seven Connected Field Service Components

Component	What it is
Customer Asset	The specific piece of equipment the customer owns
Device Category	Groups devices of the same kind so they share configuration
IoT Device	The registered physical device that sends telemetry
IoT Alert	A notification raised when telemetry breaches a rule
IoT Device Command	An instruction sent back down to the device
Command Definition	The template describing an available command and its parameters
Property Definition	The telemetry properties a device reports and their units

The business case: reduce downtime, diagnose before the customer notices, and avoid the truck roll entirely when a remote command will do.

LAB 10 · 55 MIN

Lab 10 — Schedule Resources, Manage Assets and Connect IoT

The work order from Lab 9 must now be scheduled, and the customer's equipment tracked over its life. You book the work with the schedule assistant, work the schedule board as a dispatcher (rebook, substitute, move), build the customer asset hierarchy with its service history, and register an IoT device so an alert can raise a work order automatically. This completes LO3, LO4 and LO5.

1. Book the work order with the schedule assistant
2. Work the schedule board as a dispatcher
3. Rebook, substitute and move bookings
4. Build the customer asset hierarchy and history
5. Register the IoT device and raise an alert

YOU'LL PRODUCE A booked work order on the schedule board, a rebooked and substituted booking, a customer asset hierarchy with service history, and an IoT device registered against an asset with an alert that creates a work order.

WRAP-UP

Course Summary & Next Steps

© 2026 Tertiary Infotech Academy Pte Ltd

LEARNING OUTCOMES DELIVERED

What You Achieved

1

Implemented CRM capabilities

Navigated the platform, explored Dataverse, and built customers, activities and reporting. (LO1)

2

Defined customer journeys

Built segments, emails, journeys, forms and events in Customer Insights – Journeys. (LO2)

3

Optimised deployment

Ran the lead-to-cash cycle, the case lifecycle and the work order lifecycle end to end. (LO3)

4

Drew actionable insights

Read pipelines, forecasts, service KPIs and sentiment to evaluate team performance. (LO4)

5

Recommended investment

Compared Sales Insights tiers and scheduling methods, and wrote the recommendation. (LO5)

CONTINUING THE JOURNEY

Where to Go Next

1

Practise in a trial

A 30-day Dynamics 365 trial at trials.dynamics.com keeps every lab repeatable.

2

Sit the MB-910 exam

Microsoft Certified: Dynamics 365 Fundamentals (CRM) — the credential this course maps to.

3

Go deeper on one app

Role-based certifications exist for Sales (MB-210), Service (MB-230) and Field Service (MB-240).

4

Learn the platform

PL-900 Power Platform Fundamentals is the natural companion to this course.

5

Build something

The fastest way to consolidate: model a real process from your own organisation.

6

Keep the materials

Your slides, Learner Guide and lab files stay available on the LMS/TMS portal.

Practice Exam

https://exams.tertiaryinfotech.com

Tertiary Infotech Practice Exams
Microsoft Dynamics 365 Fundamentals (CRM) MB-910

Question 7 of 50

Which app unifies data into a single customer profile?

A. Customer Insights – Journeys

B. Customer Insights – Data

C. Customer Voice

1 Practise before you certify
Timed, exam-style questions across all four MB-910 skill areas.

2 Read the explanations
Each answer explains why it is right — and why the others are not.

3 Target your revision
Weak area? Go back to that topic's slides and lab.

4 Then sit the real exam
MB-910 via Pearson VUE, or the free Microsoft practice assessment.

FINAL ASSESSMENT

Assessment

1

Written Assessment (WA)

Short-Answer Questions — 1 hour. Tests the knowledge behind the four MB-910 skill areas.

2

Practical Performance (PP)

Hands-on Dynamics 365 tasks — 1 hour. Drawn from the ten labs you completed.

3

Open book

Course slides, Learner Guide and approved materials only.

4

Attendance first

Take the Assessment digital attendance before you start.

5

Submit on the LMS

Upload your completed answers at lms-tms.tertiaryinfotech.com.

6

Competent in BOTH

Both instruments must be passed to be awarded the certificate.

© 2026 Tertiary Infotech Academy Pte Ltd

ON ASSESSMENT DAY

Assessment Flow

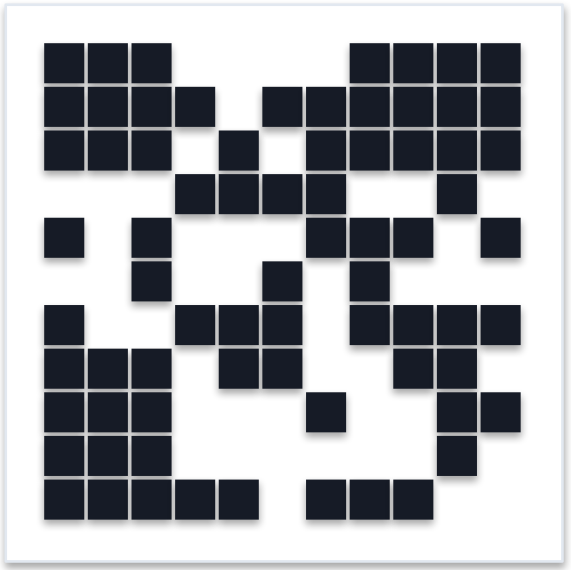

Competent in BOTH instruments + 75% attendance = certificate and WSQ funding

Survey → attendance → Written Assessment → Practical Performance → sign the Assessment Summary Record.

© 2026 Tertiary Infotech Academy Pte Ltd

MANDATORY · SSG / WSQ

Digital Attendance & TRAQOM Survey

Scan with your phone camera

1. **Three attendance takes**
   AM, PM and Assessment — every day of a WSQ-funded course.

2. **The trainer shows the QR**
   Generated live from the SSG portal — it changes each session.

3. **Scan and submit**
   Open your phone camera, scan, and submit your attendance.

4. **75% minimum**
   Below 75% attendance you lose funding eligibility and cannot be assessed.

5. **TRAQOM survey**
   Complete the mandatory course survey on the LMS before you leave.

© 2026 Tertiary Infotech Academy Pte Ltd

SEE YOU IN THE NEXT COURSE

Thank You!

You can now navigate Dynamics 365, describe every customer engagement app, and explain how marketing, sales, service and field operations run on one platform.
