TOPIC 07 · HANDS-ON LAB · 60 MINUTES

Lab 7 — Resolve a Case with Knowledge, Queues, SLAs and Entitlements

Explore Dynamics 365 Customer Service

Objective

Explore Dynamics 365 Customer Service: the case lifecycle, SLAs and entitlements, queues and routing, business process flows and knowledge management.

Scenario

Alpine Ski House has received a damaged espresso machine. You author and publish the knowledge article that answers it, create the case, route it through a queue, watch the SLA clock, apply an entitlement, work the Phone to Case business process flow, attach the article and resolve the case. This is the complete service lifecycle behind LO1 and LO3.

What you'll produce

DELIVERABLE
A published knowledge article, a case routed through a queue with an SLA and an entitlement applied, advanced through all three BPF stages and resolved with the article linked.

Tools: Dynamics 365 Customer Service Hub, Dataverse, knowledge management, queues, routing rules, SLAs, entitlements

Workflow

1	2	3	4	5
Author and publish the knowledge article	Create the case and set its customer and origin	Route it to a queue and apply the SLA and entitlement	Work the Phone to Case BPF and attach the article	Resolve the case and check the resolution record

Mock data supplied

The files below are in the **data/** folder beside this PDF. Import them as each step directs — do not retype the values.

data/cases.csv — 5 rows

Case Title	Customer	Contact	Origin	Priority	Case Type	Subject	Description
Item arrived Damaged	Alpine Ski House	Patrick Sands	Phone	High	Problem	Shipping	Espresso machine casing dented on delivery; unit will not power on
Grinder producing inconsistent grind	Jurong Cafe Group	Daniel Lim	Email	Normal	Problem	Product	Burr grinder G200 output varies between doses since last service
Cold brew dispenser leaking	Changi Airport Kiosks	Ravi Kumar	Phone	High	Problem	Product	CB50 dispenser leaking at the tap seal, kiosk floor affected
Request for extra training session	Orchard Hotels	Kevin Teo	Web	Low	Request	Service	New F&B staff intake needs an additional barista training session

© 2026 Tertiary Infotech Academy Pte Ltd

Case Title	Customer	Contact	Origin	Priority	Case Type	Subject	Description
Invoice query on service plan	Sentosa Resorts	James Ong	Email	Normal	Question	Billing	Annual service plan invoiced twice for the same period

data/knowledge-articles.csv — 5 rows

Title	Keywords	Subject	Summary
Item Broken on Arrival	damaged, broken, shipping, replacement	Shipping	Steps to handle equipment damaged in transit: inspect, photograph, log the courier reference, raise a replacement within 48 hours, arrange collection
Calibrating the G200 burr grinder	grinder, calibration, inconsistent, dose	Product	How to recalibrate the burr gap and verify dose consistency over five consecutive shots
Replacing the CB50 tap seal	cold brew, leak, tap, seal	Product	Isolate the dispenser, drain, replace the tap seal cartridge, pressure test and return to service
Booking an additional training session	training, barista, booking	Service	How to check remaining training entitlement and book an extra session through the account manager
Resolving duplicate service plan invoices	invoice, billing, duplicate	Billing	Verify the billing period, check for a duplicate order line, raise a credit note and confirm with the customer

Step-by-step

1. Open the Dynamics 365 Customer Service Hub. In the left navigation, switch the area to Service and select Knowledge Articles, then choose New on the command bar.
2. Author the article using row 1 of data/knowledge-articles.csv: Title 'Item Broken on Arrival - <your initials>', Keywords 'damaged, broken, shipping, replacement'. In the Content tab write the resolution steps: inspect and photograph the damage, log the courier reference, raise a replacement within 48 hours, and arrange collection of the damaged unit.
3. Save the article. Note the Article Public Number generated and the article's status (Draft) and stage on the knowledge lifecycle: Author -> Review -> Publish.
4. Open the Summary tab and set the Language. Then select Publish on the command bar. Set Publish Status to Published, choose to publish immediately, and confirm. Verify the article status is now Published — only published articles can be found by agents and customers.
5. Create the case. Select Cases from the Service section of the left navigation, then New Case on the command bar.
6. Complete the case from row 1 of data/cases.csv: Case Title 'Item arrived Damaged - <your initials>', Customer 'Alpine Ski House' (or Marina Bay Roasters if Alpine Ski House does not exist in your environment), Origin 'Phone', Priority 'High'. Select Save and leave the record open.
7. Examine the SLA. On the case form open the Related tab > SLA KPI Instances (or look for the First Response By and Resolve By fields on the form header). Note the countdown timer and the target time. If no SLA is applied, create one: Advanced Settings > Service Management > Service Level Agreements > New, add a First Response KPI with a 1-hour target, activate it and set it as the default.
8. Apply an entitlement. Open the Related tab > Entitlements on the customer account, or create one: Service Management > Entitlements > New, set the Customer, a Start and End date, Allocation Type 'Number of cases', Total Terms '10', and Activate it. Return to the case and set the Entitlement field. Note that the Remaining Terms decrement when the case is resolved.
9. Route the case to a queue. On the command bar select Save & Route (or Add to Queue). Choose an existing queue, or create one first: Service Management > Queues > New, name it 'Tier 1 support - <your initials>', type Private. Confirm the case now appears in that queue's items.
10. Open the queue (Service > Queues, and select your queue in the view picker). Select your case and choose Pick on the command bar to assign it to yourself — this is how an agent takes ownership of queued work.
11. Review the routing options in the environment: Service Management > Routing Rule Sets shows basic routing (rule items that direct cases to queues by criteria). Note where unified routing is configured instead (Customer Service

© 2026 Tertiary Infotech Academy Pte Ltd

admin center > Routing) and record the difference: basic routing sends to a queue; unified routing assigns to an agent using skills, capacity and presence.

12 Work the business process flow. On the case, note the Phone to Case Process across the top with its three stages: Identify, Research, Resolve. Select the Identify stage and set Find Contact to the account's primary contact. Close the flyout with the X.

13 On the case Timeline select the + icon > Phone Call. Set the Subject to 'Return call to customer - <your initials>' and leave the rest as is. Select Save and Close.

14 Select the Identify stage and choose Next Stage to advance to Research. Close the flyout.

15 On the right side of the case form, select the Knowledge (book) icon to open the knowledge search pane. Note that the case title is used automatically as the search text. Locate the 'Item Broken on Arrival' article you published.

16 Open the article in the pane and select the Link this article to the current record icon. Verify the text 'Linked to Case' appears. Note the other options: email the article to the customer, or copy its link.

17 Complete the phone call activity: on the Timeline hover over 'Return call to customer' and select the check-mark icon, then Close on the dialog. Verify it shows as Closed.

18 Select the Research stage and choose Next Stage to advance to Resolve. Close the flyout, then select Finish on the Resolve stage to complete the process flow.

19 On the command bar select Resolve Case. On the dialog set Resolution Type to 'Knowledge Article' (or Problem Solved), enter a Resolution description, note the Billable Time, and select Resolve.

20 Confirm the case status is now Resolved, that a Case Resolution activity appears on the timeline, and that the entitlement's Remaining Terms decreased by one. Record the SLA outcome (met or breached) in your worksheet.

Test it

VERIFY BEFORE YOU MOVE ON

Your knowledge article is Published; your case was routed to a queue, picked, had an SLA and an entitlement applied, advanced through Identify -> Research -> Resolve, has the article shown as 'Linked to Case', and is Resolved with a Case Resolution activity on its timeline.
